many current texts in the area are just cookbooks and as a result students do not know why they perform the methods they are taught or why the methods work the strength of this book is that it readdresses these shortcomings by using examples often from real life and using real data the authors show how the fundamentals of probabilistic and statistical theories arise intuitively a modern introduction to probability and statistics has numerous quick exercises to give direct feedback to students in addition there are over 350 exercises half of which have answers of which half have full solutions a website gives access to the data files used in the text and for instructors the remaining solutions the only pre requisite is a first course in calculus the text covers standard statistics and probability material and develops beyond traditional parametric models to the poisson process and on to modern methods such as the bootstrap
