the vulnerability of our civilization to earthquakes is rapidly growing raising earthquakes to the ranks of major threats faced by humankind earthquake prediction is necessary to reduce that threat by undertaking disaster preparedness measures this is one of the critically urgent problems whose

solution requires fundamental research at the same time prediction is a major tool of basic science a source of heuristic constraints and the final test of theories this volume summarizes the state of the art in earthquake prediction its following aspects are considered existing prediction algorithms and the quality of predictions they provide application of such predictions for damage reduction given their current accuracy so far limited fundamental understanding of the lithosphere gained in earthquake prediction research emerging possibilities for major improvements of earthquake prediction methods potential implications for predicting other disasters besides earthquakes methodologies at the heart of the research described here is the integration of three methodologies phenomenological analysis of observations universal models of complex systems such as those considered in statistical physics and nonlinear dynamics and earth specific models of tectonic fault networks in addition the theory of optimal control is used to link earthquake prediction with earthquake preparedness

this introduction just aims to be a fast foreword to the special topic now turned into an e book the editorial decision making experiments under a philosophical analysis human choice as a challenge for neuroscience alongside with my opinion article neurophilosophical considerations on decision making pushing up the frontiers without disregarding their foundations play the real role of considering in more details the articles and the whole purpose of this e book what i must highlight in this foreword is that our intention with such a project was to deepen into the very foundations of our current paradigms in decision neuroscience and to philosophically moot its foundations and repercussions normal science a term coined by philosopher thomas kuhn works under a research consensus among a scientific community a shared paradigm consolidated methods widespread convictions pragmatically winning formulas must be kept although not at any cost what differentiates a gifted and revolutionary scientist from a more bureaucratic colleague is the capacity and willingness of constantly reevaluating depurating and refining his her own paradigm that is best strategy to avoid that a paradigm itself would gradually come under challenge in my view some achievements in this sense were brought about in our project the e book will be inspiring and informative for both neuroscientists that are concerned with the very foundations of their works and for philosophers that are not blind to empirical evidence kant once said thoughts without content are empty intuitions without concepts are blind paraphrasing kant we could say philosophy without science is empty science without philosophy is blind

we have developed tools to measure the performance of a variety of machines from workstations to supercomputers we have also characterized the

execution of many large applications including the spec and perfect benchmark suites by merging these machine and program characterizations we can estimate execution times quite accurately for arbitrary machine program combinations another aspect of the research has consisted in characterizing the effectiveness of optimizing compilers another contribution of this dissertation is to propose and investigate new metrics for machine and program similarity and the information that can be derived from them
