in byzantium there were two overlapping systems of dress a semiotic one whereby dress was a code for rank and wealth and a fashion system where dress was based on the desire to look a certain way this book explains secular dress from the eighth to the twelfth centuries through an examination of painted representations

atypical demonstratives have not received adequate attention in the literature so far or have even been completely neglected by providing fresh insights and discussing new facets this volume contributes to the better understanding of this group of words starting from specific empirical phenomena and advances our knowledge of the various properties of demonstratives their syntactic multi functionality semantic feature specifications and pragmatic functions in addition some of the papers discuss different grammaticalization processes involving demonstratives in particular how and from which lexical and morphosyntactic categories they originate cross linguistically and which semantic or pragmatic mechanisms play which role in their emergence as such the different contributions guide the readers on an adventurous journey into the realm of different exotic species of demonstratives whose peculiar properties offer new exiting insights into the complex nature of demonstrative expressions themselves

during the past 20 years the investigation into meaning of natural languages has emerged into one of the most active disciplines in theoretical linguistics the different traditions of linguistics philosophy of language and philosophical logic converged in the paradigm of truth conditional semantics which now plays a central role in the cognitive sciences from empirical research in particular languages more principal questions arise of how the speaker succeeds in expressing particular types of meaning by use of formal combination of signs the theories developed to cope with the question assume that for a hearer the meaning of a complex expression must be computable and therefore modern theoretical semantics uses formal algebraic methods to construct the meaning compositionally in view of syntactic structur furthermore meaning need to be anchored in the experience available to hearer in order to deal with this

theoretical semantics extensivly uses the concept of truth conditions which roughly explain how a world must be structured in order to be matched by certain linguistic expressions semantic analyses are complemented by context theory and the theory of speech acts thus linguistic meaning must be related to human cognitive capacities and therefore theoretical semantics is tightly connected with philosophical logic as well as cognitive sciences in general the aim of this handbook is to represent the body of theoretical knowledge which has evolved in the international research of the last two decades some of the theories can now be termed classical in that they belong to the commonly accepted base of theoretical semantics other theories are still disputed and there areproblems still to be solved as normal in a more developed science the authors who are leading experts in the field of semantics try to balance the accepted and the questionable results it goes without saying that each author hold a particular position in this respect some articles are written in english some in german since semantics is considered to be a subfield of linguistics the articles are arranged due to linguistic points of view in the first 5 chapters comprising 15 articles the common principles of semantics are presented ontological foundations of semantics composition of meaning problems of use context speech acts and lexical base of meaning the next 5 chapters comprising 25 articles are concerned with semantic phenomena theories and problems which are specific for a particular class of linguistic expressions these are arranged according to parts of speech nouns functional categories verbs adjectives and so on this division does not reflect a theoretical position by itself however it allows one to recognize problems connected with one another some more general questions are discussed in more than one article in different perspective and vicinity the handbook is complemented by a service article on formal methods in semantics followed by a comprehensive bibliography including about 1700 entries and both a subject and a name index this handbook is indispensable for all research in linguistics and neighboring disciplines philosophy of language cognitive sciences some of the articles can serve as basic literature for classes of advanced students

mouton proudly presents this collection of articles considered to be representative of author achievements over the past quarter century

of its publishing history a selection of course can do little more than make the readers wish for more it is hoped that these volumes will do just that the book contains essays on phonology morphology formal syntax functional linguistics historical linguistics language and cognition language acquisition discourse and text sociology of language semiotics
