there is a growing interest in the use of ontologies for multi agent system app cations on the one hand the agent paradigm is successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal on the other hand ontologies have established themselves as a powerful tool to enable kno edge sharing and a growing number of applications have bene ted from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed systems in principle ontologies and agents are a match made in heaven that has failed to happen what makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user communication ultimately depends on und standing the goals preferences and constraints posed by the user autonomy is theabilitytoperformataskwithlittleornouserintervention whileproactiveness involves acting

in this book we discuss requirements challenges design and implementation of two knowledge management systems smartappgen and autoquiz this book will help automating knowledge management of your company institute smartappgen automatically generates the corresponding knowledge application from structured knowledge represented as xml excel sheet ppt etc as example suppose a health worker needs to undergo training for few weeks at the training s he has to go through hundreds of pages of knowledge materials what if a knowledge application is automatically built using the knowledge available and installed in his her smart phone the training time can be reduced drastically also the health worker would not have to

remember all hundreds of pages of documentation s he would not have to refer to the printed guidelines from time to time for executing his her daily routine so it is clear that knowledge application can increase efficiency and accuracy of healthcare services not all knowledge are so well formatted that a knowledge application can be automatically 3 developed and installed in a smart phone so people still have to undergo trainings and remember the things learned at training autoquiz comes handy in such cases given knowledge e g training material presentation etc in a text format it can generate a meaningful quiz from the unstructured knowledge at end of any training presentation a quiz can be automatically generated and all participants can be asked to take the quiz there score is immediately calculated this achieves three things people would be more alert in training the trainer can find the effectiveness of his training immediately and trainer manager would know which all people are falling short in understanding and take appropriate measures to bring them up to the mark
