science and the construction of women is a multi disciplinary exploration of the major questions currently challenging feminist scholars of science the authors ask key questions what constitutes science how have feminists investigated it how does science construct women how can we create a feminist discourse of science are the current developments to women's advantage or disadvantage their answers draw on material from a wide range of natural scientific humanities and social science sources critically examining theoretical approaches from the postmodern to the materialist to the cyborgian a key argument of the book is that there are strong intellectual and pragmatic reasons the rapid development of information technology advances in fertility treatment and genetic engineering feminist concern for environmental issues why feminism must rigorously engage with issues of a scientific and technological nature science and the construction of women provides an important contribution to the opening up and broadening of debate in the field this book will be an important text for students of gender and women's studies and science studies it is also designed to be read by feminists both inside and outside the academy and to appeal to all those with interests in the sociology of knowledge and the history of ideas

defense of scientific hypothesis from reproducibility crisis to big data sets out to explain and defend the scientific hypothesis alger's mission is to counteract the misinformation and misunderstanding about the hypothesis that even seasoned scientists have concerning its nature and place in modern science most biological scientists receive little or no formal training in scientific thinking further the hypothesis is under attack by critics who claim that it is irrelevant to science in order to appreciate and evaluate scientific controversies like global climate change vaccine safety etc the public first needs to understand the hypothesis defense of scientific hypothesis begins by describing and analyzing the scientific hypothesis in depth and examining its relationships to various kinds of science alger then guides readers through a review of the hypothesis in the context of the reproducibility crisis and presents survey data on how scientists perceive and employ hypotheses he assesses cognitive factors that influence our ability to use the hypothesis and makes practical and policy recommendations for teaching and learning about it finally alger considers two possible futures of the hypothesis in science as the big data revolution looms in one scenario the

hypothesis is displaced by the big data mindset that forgoes understanding in favor of correlation and prediction in the other robotic science incorporates the hypotheses into mechanized laboratories guided by artificial intelligence but in his illuminating epilogue alger envisions a third way the centaur scientist a symbiotic relationship between human scientists and computers
