there is a growing interest in the use of ontologies for multi agent system app cations on the one hand the agent paradigm is successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal on the other hand ontologies have established themselves as a powerful tool to enable kno edge sharing and a growing number of applications have bene ted from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed

systems in principle ontologies and agents are a match made in heaven that has failed to happen what makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user communication ultimately depends on understanding the goals preferences and constraints posed by the user autonomy is the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting communication but also autonomy and proactiveness depend on knowledge the ability to communicate depends on understanding the syntax terms and structure and the semantics of a language ontologies provide the terms used to describe a domain and the semantics associated with them in addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms these constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based

in this book we discuss requirements challenges design and implementation of two knowledge management systems smartappgen and autoquiz this book will help automating knowledge management of your company institute smartappgen automatically generates the corresponding

knowledge application from structured knowledge represented as xml excel sheet ppt etc as example suppose a health worker needs to undergo training for few weeks at the training s he has to go through hundreds of pages of knowledge materials what if a knowledge application is automatically built using the knowledge available and installed in his her smart phone the training time can be reduced drastically also the health worker would not have to remember all hundreds of pages of documentation s he would not have to refer to the printed guidelines from time to time for executing his her daily routine so it is clear that knowledge application can increase efficiency and accuracy of healthcare services not all knowledge are so well formatted that a knowledge application can be automatically 3 developed and installed in a smart phone so people still have to undergo trainings and remember the things learned at training autoquiz comes handy in such cases given knowledge e g training material presentation etc in a text format it can generate a meaningful quiz from the unstructured knowledge at end of any training presentation a quiz can be automatically generated and all participants can be asked to take the quiz there score is immediately calculated this achieves three things people would be more alert in training the trainer can find the effectiveness of his training immediately and trainer manager would know which all people are falling short in understanding and take appropriate measures to bring them up to the mark

in june of 1983 our expert systems research group at carnegie mellon university began to work actively on automating knowledge acquisition for expert systems in the last five years we have developed several tools under the pressure and influence of building expert systems for business and industry these tools include the five described in chapters 2 through 6 more mole salt knack and sizzle one experiment conducted jointly by developers at digital equipment corporation the soar research group at carnegie mellon and members of our group explored automation of knowledge acquisition and code development for xcon also known as r1 a production level expert system for configuring dec computer systems this work influenced the development of rime a programming methodology developed at digital which is the subject of chapter 7 this book describes the principles that guided our work looks in detail at the design and operation of each tool or methodology and reports some lessons learned from the enterprise of the work brought out in the introductory chapter is a common theme that much power can be gained by understanding the roles that domain knowledge plays in problem solving each tool can exploit such an understanding because it focuses on a well defined problem solving method used by the expert systems it builds each tool chapter describes the basic problem solving method assumed by the tool and the leverage provided by committing to the method
