corpus applications in language teaching and research the case of data driven learning of german provides a historical overview of corpus applications in language teaching with a focus on german the book identifies challenges in using corpus applications and data driven

learning DLL research for languages other than English. It addresses these challenges through various approaches. Overall, this book surveys corpus applications for teaching and learning German, highlighting the growth of the L2 German DLL field and identifying trends in integrating DLL into pedagogical practice. It presents empirical research on the effectiveness of DLL applications for teaching and learning German in comparison with research on English and other languages. It emphasizes the need for expanding the scope of DLL research to include more languages, skills, and study types. It compares teaching interventions for L2 collocations in the fields of instructed second language acquisition (ISLA) and DLL, highlighting methodological differences between the two paradigms and proposing a combined ISLA-DLL framework to bridge the disconnect. It showcases a successful DLL intervention that resulted in significant learning gains in German collocation knowledge, filling a gap in DLL research. It proposes an open educational resource (OER) for teaching and learning German, incorporating open access corpora, learner fit criteria, new tools and technology, and usage-based learning principles. It examines the current difficulties encountered by the DLL field and highlights potential directions for future research and pedagogical approaches. This book offers insights and resources for researchers, language teaching practitioners, and students interested in corpus-based learning and teaching methods. While the focus is on teaching German to English-speaking students, the book's findings have broader applicability to language teaching and learning in different contexts.

written with the practicing medicinal chemist in mind. This is the first modern handbook to systematically address the topic of bioisosterism. As such, it provides a ready reference on the principles and methods of bioisosteric replacement as a key tool in preclinical drug development. The first part provides an overview of bioisosterism, classical bioisosteres, and typical molecular interactions that need to be considered. While the second part describes a number of molecular databases as sources of bioisosteric identification and rationalization, the third part covers the four key methodologies for bioisostere identification and replacement: physicochemical properties, topology, shape, and overlays of protein-ligand crystal structures. In the final part, several real-world examples of bioisosterism in drug discovery projects are discussed, with detailed descriptions of databases, methods, and real-life case studies. This is tailor-made for busy industrial researchers with little time for reading, while remaining easily accessible to novice drug developers due to its systematic structure and introductory section.

this volume, the proceedings of a 2005 conference, looks at long-distance contacts and exchange and the collapse and creation of international systems during late antiquity.
