designs in nanoelectronics often lead to challenging simulation  
 problems and include strong feedback couplings industry demands  
 provisions for variability in order to guarantee quality and yield it  
 also requires the incorporation of higher abstraction levels to allow  
 for system simulation in order to shorten the design cycles while at  
 the same time preserving accuracy the methods developed here promote a  
 methodology for circuit and system level modelling and simulation based  
 on best practice rules which are used to deal with coupled  
 electromagnetic field circuit heat problems as well as coupled electro  
 thermal stress problems that emerge in nanoelectronic designs this book  
 covers 1 advanced monolithic multirate co simulation techniques which  
 are combined with envelope wavelet approaches to create efficient and  
 robust simulation techniques for strongly coupled systems that exploit  
 the different dynamics of sub systems within multiphysics problems and  
 which allow designers to predict reliability and ageing 2 new  
 generalized techniques in uncertainty quantification uq for coupled  
 problems to include a variability capability such that robust design  
 and optimization worst case analysis and yield estimation with tiny  
 failure probabilities are possible including large deviations like 6  
 sigma 3 enhanced sparse parametric model order reduction techniques  
 with a posteriori error estimation for coupled problems and for uq to  
 reduce the complexity of the sub systems while ensuring that the  
 operational and coupling parameters can still be varied and that the  
 reduced models offer higher abstraction levels that can be efficiently  
 simulated all the new algorithms produced were implemented transferred  
 and tested by the eda vendor magwel validation was conducted on  
 industrial designs provided by end users from the semiconductor  
 industry who shared their feedback contributed to the measurements and  
 supplied both material data and process data in closing a thorough

comparison to measurements on real devices was made in order to demonstrate the algorithms industrial applicability

matters related to sustainable development albeit global in nature are best handled at the local level this line of thinking is particularly true to the higher education context where the design and implementation of sustainability initiatives on campuses can demonstrate how a given university translates the principles of sustainable development into practice at the institutional level yet there is a paucity of specific events where a dialogue among sustainability academics and practitioners concerned with a research projects b teaching and c planning and infra structure leading to campus greening takes place so as to allow a transdisciplinary and cross sectoral exchange of ideas and experiences on the issues matters and problems at hand it is against this background that this book has been prepared it is one of the outcomes of the first symposium on sustainability in university campuses ssuc 2017 organised by the university of são paulo in brazil manchester metropolitan university uk the research and transfer centre applications of life sciences of the hamburg university of applied sciences germany and the inter university sustainable development research programme iusdrp this book showcases examples of campus based research and teaching projects regenerative campus design low carbon and zero carbon buildings waste prevention and resilient transport among others it also demonstrates the role of campuses as platforms for transformative social learning and research and explores the means via which university campuses can be made more sustainable the aims of this publication are as follows i to provide universities with an opportunity to obtain information on campus greening and sustainable campus development initiatives from round the world ii to document and promote information ideas and experiences acquired in the execution of research teaching and projects on campus greening and design especially successful initiatives and good practice iii to introduce methodological approaches and projects which aim to integrate the topic of sustainable development in campus design and operations this book entails contributions from researchers and practitioners in the field of campus greening and sustainable development in the widest sense from business and economics to arts administration and environment
