this text draws together a number of recent results concerning barrelled locally convex spaces from general facts involving cardinality and dimensionality to barrelledness of some familiar vector valued or scalar valued normed spaces of functional analysis

and providing a study of some of these spaces throughout the exposition the authors show the strong relationship between barrelledness properties and vector valued measure theory

the book is aimed at people working in number theory or at least interested in this part of mathematics it presents the development of the theory of algebraic numbers up to the year 1950 and contains a rather complete bibliography of that period the reader will get information about results obtained before 1950 it is hoped that this may be helpful in preventing rediscoveries of old results and might also inspire the reader to look at the work done earlier which may hide some ideas which could be applied in contemporary research

handbook of algebra defines algebra as consisting of many different ideas concepts and results even the nonspecialist is likely to encounter most of these either somewhere in the literature disguised as a definition or a theorem or to hear about them and feel the need for more information each chapter of the book combines some of the features of both a graduate level textbook and a research level survey this book is divided into eight sections section 1a focuses on linear algebra and discusses such concepts as matrix functions and equations and random matrices section 1b cover linear dependence and discusses matroids section 1d focuses on fields galois theory and algebraic number theory section 1f tackles generalizations of fields and related objects section 2a focuses on category theory including the topos theory and categorical structures section 2b discusses homological algebra cohomology and cohomological methods in algebra section 3a focuses on commutative rings and algebras finally section 3b focuses on associative rings and algebras this book will be of interest to mathematicians logicians and computer scientists
