this book highlights the intrinsic structures of all kinds of energetic compounds and some structure property relationships therein energetic materials are a class of energy materials that can transiently release a large amount of gases and heat by self redox after stimulated and usually refer to explosives propellants and pyrotechnics nowadays in combination with various theories and simulation aided material design technologies many new kinds of energetic materials like energetic extended solids energetic ionic salts energetic metal organic frames energetic cocrystals and energetic perovskites have been created in addition to traditional energetic molecular crystals it is somewhat dazzling and an issue of how we can understand these new types of energetic materials is raised in the past about 20 years we were immersed in the computational energetic materials by means of defining a concept of intrinsic structures of energetic materials which refers to the crystal packing structure of energetic materials as well as molecule for molecular solid specially the microscopic structures have been mostly clarified and related with many macroscopic properties and performances with molecular simulations this book presents our understanding about it thereby a simply and new way to readily understand energetic materials is expected to be paved based on this book it contains energetic molecular crystals energetic ionic crystals energetic atomic crystals energetic metallic crystals and energetic mixed type crystals and the substructures closest to crystal packing meanwhile the common intermolecular interactions in energetic crystals will be introduced in addition theoretical and

simulation methods for treating the intrinsic structures will be briefed as they are the main tools to reveal the molecules and crystals besides the polymorphism as a level of intrinsic structures will be briefly discussed in the final of this book we introduce the crystal engineering of energetic materials this book features the first proposal of intrinsic structure and crystal engineering of energetic materials and the understanding of the properties and performances of energetic materials by maintaining a concept that structure determines property it helps to promote the rationality in creating new energetic materials rather than increase experience
