in january of 2012 a new theory was awarded the nobel prize in physics our universe s galaxies appeared to all be accelerating outward what was causing this continuous acceleration was claimed to be dark energy this appeared to convince the nobel prize committee that these astrophysicists would eventually solve the mystery of dark energy as a highly experienced retired problem solver looking for a juicy challenge

i realized that it was quite possible that this team of physicists had created a mystery worthy of my skill as an accomplished problem solver possibly i might successfully discover any flaw in their theory however i realized that without my knowing what really created our universe it would have been nearly impossible for me to solve this problem so instead i began to search the universe for mysteries that might suggest what could have created our universe i found seventeen which all suggested that for one reason or another it had to be some sort of a violent collision that could have created our universe as opposed to the explosion predicted in the big bang theory each of these seventeen theories turned out to have great significance in proving what far more likely created our universe this would also include my discovery that the big bang theory could not possibly have created our universe additionally it would prove that our universe s galaxies are all actually decelerating back to the origin as originally believed invalidating the hypothesis that our universe s galaxies are all accelerating outward with scientifically credible proof supporting this claim the claim that if two black holes had been far enough apart and collided at a great enough speed they could have expelled enough physical matter to have created our universe these seventeen mysteries contributed to my success in solving the mystery of what led directly into the cosmic collision theory which also helped to solve some of the seventeen mysteries and proved that our universe s galaxies are all decelerating back to the origin the enormous black hole at the center of our universe additionally there s a chapter in this theory proving that albert einstein s search for his hypothetical cosmological constant could never have resulted in establishing his constant it would have always been his inconstant constantly varying this same condition also applies to edwin hubble s search for a similar constant to use in simplifying his findings with no luck this cosmic collision theory also solves these mysteries if this cosmic collision theory is correct every one

of our universe's galaxies will eventually decelerate back to the origin don't panic this might take at least a billion or more years or so giving our civilization the time to discover another inhabitable planet to move to preferably in a much more distant galaxy in our universe how we would get there is for future scientists to figure out fyi this writer is now going into his ninety second year it consumed some nine years of research and contemplation to develop this almost all inclusive theory of almost everything pertaining to the current existence of our universe note this cosmic collision theory is written completely in conversational english suitable for all readers from high school and up there are no equations charts or greek symbols the typical reader will have little problem in understanding the explanations in plain english 1 march 10 2017 submission to writer's forum victor g lipshutz

examines what is known about various galaxies and presents theories about their formation

includes the claverings by anthony trollope interspersed through vols 1 3 1866 67

this witty book reveals the humbling vastness of our ignorance about the universe along with charming insights into what we actually do understand carlo rovetli author of seven brief lessons on physics and reality is not what it seems in our small corner of the universe we know how some matter behaves most of the time and what even less of it looks like and we have some good guesses about where it all came from but we really have no clue what's going on in fact we don't know what about 95 of the universe is made of so what happens when a cartoonist and a physicist walk into this strange mostly unknown universe jorge cham and daniel whiteson gleefully explore the biggest unknowns why

these things are still mysteries and what a lot of smart people are doing to figure out the answers or at least ask the right questions while they're at it they helpfully demystify many complicated things we do know about from quarks and neutrinos to gravitational waves and exploding black holes with equal doses of humour and delight they invite us to see the universe as a vast expanse of mostly uncharted territory that's still ours to explore this is a book for fans of brian cox and what if this highly entertaining highly illustrated book is perfect for anyone who's curious about all the great mysteries physicists are going to solve next

coverage is divided into two parts natural global changes and human induced global changes this edition which contains new illustrations and tables looks at acid disposition stratospheric ozone depletion and global climatic change
