It is widely understood that stem cell treatments have the potential to revolutionize medicine because of this potential in 2004 California voters approved Proposition 71 to set up a 10 year 3 billion program to fund research on stem cells under the direction of the California Institute for Regenerative Medicine. This program will pay to build facilities for stem cell research and will fund doctors and scientists to carry out research with the ultimate goal of helping to develop therapies based on stem cells. For this research to move forward, however, will require a steady supply of stem cells, particularly human embryonic stem cells. Those stem cells are collected from developing human embryos created from eggs or oocytes harvested from the ovaries of female donors. Thus, much of the promise of stem cells depends on women choosing to donate oocytes to the research effort. The oocyte donation process is not without risk; however, donors are given doses of hormones to trigger the production of more eggs than would normally be produced, and this hormone treatment can have various side effects. Once the eggs have matured in the ovary, they must be retrieved via a surgical procedure that is typically performed under anesthesia, and both the surgery and the anesthesia carry their own risks. Furthermore, given the very personal nature of egg donation, the experience may carry psychological risks for some women as well. With this in mind, in

2006 the California Institute for Regenerative Medicine contracted with the National Academies to organize a workshop that would bring together experts from various areas to speak about the potential risks of oocyte donation and to summarize what is known and what needs to be known about this topic. The Committee on Assessing the Medical Risks of Human Oocyte Donation for Stem Cell Research was formed to plan the workshop, which was held in San Francisco on September 28, 2006. This report is a summary and synthesis of that workshop.

This book analyzes the positive changes, challenges, and corresponding solutions regarding charitable donation in China. It discusses a number of issues including donors and their modes of donation, donation intermediaries and their behavioral characteristics, cultural and social factors influencing charitable donation, methods of raising charitable funds, ways of providing charitable assistance and innovation, and trends in the development of charitable donation mechanisms in China. Confirming previous findings and integrating theoretical and applied studies, the book draws new conclusions and offers fresh insights into the research questions. It also includes a multi-dimensional analysis of the behavioral patterns of the donors and the charitable donation mechanisms in contemporary China from integrated perspectives with a systematic generalization of their key features and trends. Further topics explored include the community-based charity promotion mechanism and the trends in the mechanism development in China, which have seldom been touched on by other scholars in the field.

Emergency and Trauma Care is written for Australian emergency care providers including paramedics, emergency nurses, pre-hospital care providers, nurse practitioners, general practice nurses, and allied health practitioners including occupational therapists and physiotherapists who are caring for trauma patients. This book follows the patient journey from pre-hospital to definitive care using a body systems approach. Each chapter provides comprehensive coverage of all aspects of adult and paediatric emergencies, implications for clinical practice, is supported by chapters of professional practice, clinical skills, research, evidence-based practice, and legal, ethical, and cultural issues. Clinical assessment, physiology, management, and rationale for intervention of common and not so common emergency presentations are provided with each chapter providing clear and relevant examples for both paramedics and nurses. Emergency and Trauma Care brings together a team of highly respected clinical practitioners and academics to deliver the most up-to-date text dealing with the practical procedures and evidence experienced by emergency and trauma care providers every day. Chapter 2: Pre-hospital care overview in Australia and NZ; Chapter 10: Scene assessment, management, and rescue; Chapter 11: Pre-hospital clinical reasoning, triage, and communication; Pre-hospital and emergency nursing considerations included in all relevant chapters; Chapter 5: Cultural considerations in emergency care addresses cultural diversity, beliefs, and values and focuses on Aboriginal and Torres Strait Islander health and Maori health; Chapter 19: Resuscitation includes advanced life support, airway management, and incorporates the 2010 Australian Resuscitation Council Guidelines; Chapter 37: People with disabilities provides assessment, examination, and communication strategies for working with clients with intellectual and physical disabilities; Section 5: Focuses on examination and communication strategies for working with unique population groups including the elderly, disabled, obstetric, and paediatric patients; Section 6: Details major trauma assessment and management, blast injury, and trauma to specific body regions; Essentials: outline the main points addressed in each chapter; Practice tips: assist with communication skills, procedures, and assessment; Case studies: supported by questions throughout; Summaries and key points: review questions; Web links and references: provide for consolidation and further research; Evolve resources: include power point slides, 30 additional case studies, image bank, web links, three paramedic specific chapters including scene assessment and management.
