there is a great disparity between the ability of the major industrial nations to produce and distribute chemicals and our ability to comprehend the nature and potential severity of unintended consequences for man his life support systems and the environment generally furthermore the gap between our ability to produce and distribute myriad chemicals and our ability to identify understand or predict unfavorable environmental impacts may widen as environmental scientists we are conscious of the interrelatedness not only of environmental systems but of nations as well materials are continually moved across boundaries by human as well as natural agencies the extent rate and nature of transfer for most pollutants is largely unknown we can only guess which of the numerous chemicals produced are candidates for concern more important still is our practical ignorance of the mechanisms of chronic effects upon natural systems and of the concentrations combinations and circumstances that may lead to irreversibilities or to serious consequences for man we know very little also regarding the potential for or the kinds of indirect effects that might occur with respect to the environment itself we know little of its assimilative capacity with regard to widely dispersed pollutants and their transformation products but what we do know is disquieting and a much improved system for the evaluation and management of toxic and hazardous chemicals is needed

written for students and researchers who wish to understand the conceptual and practical aspects of sampling applied survey sampling by edward a blair and johnny blair is designed to be accessible without requiring advanced statistical training it covers a wide range of topics from the basics of sampling to special topics such as sampling rare populations sampling organizational populations and sampling visitors to a place using cases and examples to illustrate sampling principles and procedures the book thoroughly covers the fundamentals of modern survey sampling and addresses recent changes in the survey environment such as declining response rates the rise of internet surveys the need to accommodate cell phones in telephone surveys and emerging uses of social media and big data

this paper examines the risk factors associated with fiscal costs of systemic banking crises using cross country data we differentiate between immediate direct fiscal costs of government intervention e g recapitalization and asset purchases and overall fiscal costs of banking crises as proxied by changes in the public debt to gdp ratio we find that both direct and overall fiscal costs of banking crises are high when countries enter the crisis with large banking sectors that rely on external funding have leveraged non financial private sectors and use guarantees on bank liabilities during the crisis the

better quality of banking supervision and the higher coverage of deposit insurance help however alleviate the direct fiscal costs we also identify a possible policy trade off costly short term interventions are not necessarily associated with larger increases in public debt supporting the thesis that immediate intervention may be actually cost effective over time
