In what is certain to be a seminal work on metadata, John Horodyski masterfully affirms the value of metadata while providing practical examples of its role in our personal and professional lives. He does more than tell us that metadata matters; he vividly illustrates why it matters. Patricia C. Franks, PhD, CA, CRM, IGP, CIGO, FAI, President, Nagara Professor Emerita, San José State University, USA, if data is the language upon which our modern society will be built, then metadata will be its grammar: the construction of its meaning, the building for its content, and the ability to understand what data can be for us all. We are just starting to bring change into the management of the data that connects our experiences. Metadata Matters explains how metadata is the foundation of digital strategy. If digital assets are to be discovered, they want to be found. The path to good metadata design begins with the realization that digital assets need to be identified, organized, and made available for discovery. This book explains how metadata will help ensure that an organization is building the right system for the right users at the right time. Metadata matters, and is the best chance for a return on investment on digital assets, and is also a line of defense against lost opportunities. It matters to the digital experience of users; it helps organizations ensure that users can identify, discover, and experience their brands in the ways organizations intend. It is a necessary defense, which this book shows how to build.

LEDA is a library of efficient data types and algorithms and a platform for combinatorial and geometric computing on which application programs can be built. In each of the core computer science areas of data structures, graph, and network algorithms, and computational geometry, LEDA covers all and more that is found in the standard textbooks. LEDA is the first such library; it is written in C and is available on many types of machine. Whilst the software is freely available worldwide and is installed at hundreds of sites, this is the first book devoted to the library, written by the main authors of LEDA. It is the definitive account describing how the system is constructed and operates, and how it can be used. The authors supply ample examples from a range of areas to show how the library can be used in practice, making the book essential for all workers in algorithms, data structures, and computational geometry.
