the phenomenon of consciousness includes mysterious aspects providing a basis for many spiritual doctrines including religions and psychological practices these directions of human knowledge are usually considered to contradict the laws of science however quantum mechanics in a sense the mysterious direction of science allows us to include the phenomena of consciousness and life as well as the relevant phenomena in the sphere of science wolfgang pauli one of the pioneers of quantum mechanics together with great psychologist carl gustav jung guessed about the relation between quantum mechanics and consciousness in the beginning of the twentieth century however only many worlds interpretation of quantum mechanics proposed in 1957 by hugh everett iii gave the real basis for the systematic investigation of this relation roger penrose one of the apologists of the relation between quantum mechanics and consciousness claimed in his last book the road to reality that the everett s interpretation may be estimated only after creating the theory of consciousness thereagainst the author has proposed in 2000 and further elaborates in this book the so called extended everett s concept that allows one to derive the main features of consciousness and super consciousness intuition or direct vision of truth from quantum mechanics this is exposed in this book in a form intelligible for a wide audience

this book is a guide on how to apply human centered design hcd practices to an agile product development model that is used widely throughout industry and government where it is applied primarily to software and technology development efforts this has been an ongoing industry challenge due to the fact that hcd prioritizes time spent understanding the problems to be solved time spent in the problem space while agile prioritizes a fast hypothesize and deliver model time spent in the solution space organizations that attempt an agile transformation abandon it either because it was too difficult or because it did not deliver the hoped for results at the same time efforts to improve the design and experience of their products using human

centered design have a tendency to fall short because it can be difficult to see the roi of design efforts even while companies like mckinsey document design driven successes what s more a company that successfully adopts agile often seems to have an even harder time implementing hcd and vice versa this is particularly disappointing since agile and hcd should be mutually supportive in practice agile teams often bypass hcd efforts in favor of finishing their goals and thinking they are doing well only to have their work product fail to meet the actual end user s needs at first the team will become indignant we followed the expert guidance of our product owner the voice of the customer they will say followed by but it met all of the acceptance criteria they should love it it s a failure of agile that this type of sub optimal delivery happens so regularly and predictably the fact that team responses can be so accurately predicted in advance by those who ve seen this movie many times before point to a process failure or inefficiency that is widespread and desperately needs to be addressed alternatively teams will invest too heavily in up front discovery efforts that slow down delivery to an unacceptable point often while also failing to capture research based findings in a way that matures the overall strategic product or portfolio understanding the cost of misfiring goes far beyond a bad delivery or an angry customer decreased team morale drives poorer future performance cost turnover if left unchecked more cost and non productive blame sessions that lead to degraded faith in the agile product development model itself this book identifies solutions based on successful methods of integrating hcd practices by phase into an ongoing agile delivery model from the discovery through implementation and evaluation including key success factors for an hcd agile engagement approach critical points of delivery and strategies for integrating hcd into teams based on the existing design maturity of an organization or product team
