as optimization researchers tackle larger and larger problems scale interactions play an increasingly important role one general strategy for dealing with a large or difficult problem is to partition it into smaller ones which are hopefully much easier to solve and then work backwards towards the solution of original problem using a solution from a previous level as a starting guess at the next level this volume contains 22 chapters highlighting some recent research the topics of the chapters selected for this volume are focused on the development of new solution methodologies including general multilevel solution techniques for tackling difficult large scale optimization problems that arise in science and industry applications presented in the book include but are not limited to the circuit placement problem in vlsi design a wireless sensor location problem optimal dosages in the treatment of cancer by radiation therapy and facility location

a theoretical introduction to numerical analysis presents the general methodology and principles of numerical analysis illustrating these concepts using numerical methods from real analysis linear algebra and differential equations the book focuses on how to efficiently represent mathematical models for computer based study an access
