this book introduces the outcomes of author's 40 years of research especially the theory of the triangular pyramid structure of thinking that he independently proposed and the application of his development theory in the field of mathematics education the book firstly explains the substantial character of intelligence the development law of intelligence and the relationship between intelligence development and creativity cultivation secondly it discusses the structure of mathematical thinking of children and adolescents from 0 to 18 years old and the methods of developing students thinking ability and the quality of intelligence through arithmetic learning in the end this book also demonstrates the characteristics of the development of mathematical thinking ability of children at age 0 6 elementary school students and secondary school students and the related latest research in this field based on the theory of the triangular pyramid structure of thinking a number of examples are given to illustrate how the theory of intelligence development can be used in mathematics teaching to promote the development of students thinking abilities and to improve the quality of teaching this book covers various areas including psychology mathematics and education it has a great reference value for scholars in the field of psychology to study the theory of intelligence and the structure of thinking providing guidance for parents and mathematics teachers to promote children's quality of intelligence and mathematical thinking abilities and to enhance their mathematics learning effects in addition it provides examples for psychological research to serve specific subject teaching in elementary and secondary schools

bridges combinatorics and probability and uniquely includes detailed formulas and proofs to promote mathematical thinking combinatorics an introduction introduces readers to counting combinatorics offers examples that feature unique approaches and ideas and presents case by case methods for solving problems detailing how combinatorial problems arise in many areas of pure mathematics most notably in algebra probability theory topology and geometry this book provides discussion on logic and paradoxes sets and set notations power sets and their cardinality venn diagrams the multiplication principal and permutations combinations and problems combining the multiplication principal additional features of this enlightening introduction include worked examples proofs and exercises in every chapter detailed explanations of formulas to promote fundamental understanding promotion of mathematical thinking by examining presented ideas and seeing proofs before reaching conclusions elementary applications that do not advance beyond the use of venn diagrams the inclusion exclusion formula the multiplication principal permutations and combinations combinatorics an introduction is an excellent book for discrete and finite mathematics courses at the upper

undergraduate level this book is also ideal for readers who wish to better understand the various applications of elementary combinatorics

although complex problem solving has emerged as a field of psychology in its own right the literature is for the most part widely scattered and often so technical that it is inaccessible to non experts this unique book provides a comprehensive in depth and accessible introduction to the field of complex problem solving chapter authors experts in their selected domains deliver systematic thought provoking analyses generally written from an information processing point of view areas addressed include politics electronics and computers

this book constitutes the refereed proceedings of the 16th international conference on intelligent computer mathematics cicm 2023 held in cambridge uk in september 2023 the 14 full papers 2 project survey papers 6 short papers and 1 tool paper presented were carefully reviewed and selected from a total of 37 submissions the papers focus on advances in formalization automatic theorem proving and learning search and classification teaching and geometric reasoning and logic and systems among other topics

the book presents the proceedings of the 12th international conference on frontiers of intelligent computing theory and applications ficta 2024 held at intelligent systems research group isrg london metropolitan university london united kingdom during june 6 7 2024 researchers scientists engineers and practitioners exchange new ideas and experiences in the domain of intelligent computing theories with prospective applications in various engineering disciplines in the book this book is divided into four volumes it covers broad areas of information and decision sciences with papers exploring both the theoretical and practical aspects of data intensive computing data mining evolutionary computation knowledge management and networks sensor networks signal processing wireless networks protocols and architectures this book is a valuable resource for postgraduate students in various engineering disciplines

this four volume set constitutes the proceedings of the 21st ifip wg 12 5 international conference on artificial intelligence applications and innovations aiai 2025 which was held in limassol cyprus during june 2025 the 123 full papers and 7 short papers were presented in this volume were carefully reviewed and selected from 303 submissions they focus on ethical moral ai aspects related to its environmental impact privacy transparency bias discrimination and fairness

although this textbook is intended for use in a two semester sequence of courses introducing the mathematical methods of operations research part i can also be used alone for a one semester course on linear programming the authors have chosen to provide deep and thorough coverage of the most important methods in operations research rather than a superficial treatment of a larger number of topics the level of exposition is appropriate for juniors and seniors who are majoring in engineering computer science mathematics and quantitative methods in management a solutions manual is available to qualified instructors

the 88 papers included in this publication are organized into seven groupings used as themes in the conference computing knows no borders the topics are administration 12 papers computer studies 13 papers educational tools 10 papers logo 7 papers software 9 papers special education 8 papers and teaching 16 papers an eighth group under the heading other includes 13 papers which cut across several of the other themes and therefore deserved more general recognition an author index is provided jb
