this paper sets out a theory of how openness to international goods markets affects pollution concentrations we develop a theoretical model to

divide trade's impact on pollution into scale, technique, and composition effects and then examine this theory using data on sulfur dioxide concentrations when it alters the composition and hence the pollution intensity of national output. Our estimates of the associated technique and scale efforts created by trade imply a net reduction in pollution from these sources. Combining our estimates of scale, composition, and technique efforts yields a somewhat surprising conclusion: freer trade appears to be good for the environment.
