this highly interdisciplinary book covering more than six fields from philosophy and sciences all the way up to the humanities and with contributions from eminent authors addresses the interplay between content and context reductionism and holism and their meeting point the notion of emergence much of today s science is reductionist bottom up in other words behaviour on one level is explained by reducing it to components on a lower level chemistry is reduced to atoms ecosystems are explained in terms of dna and proteins etc this approach fails

quickly since we can't extrapolate to the properties of atoms solely from Schrödinger's equation nor figure out protein folding from an amino acid sequence or obtain the phenotype of an organism from its genotype. An alternative approach to this is holism top down consider an ecosystem or an organism as a whole seek patterns on the same scale model a galaxy not as 400 billion point masses stars but as an object in its own right with its own properties spiral elliptic or a hurricane as a structured form of moist air and water vapour reductionism is largely about content whereas holistic models are more attuned to context reductionism content and holism context are not opposing philosophies in fact they work best in tandem join us on a journey to understand the multifaceted dialectic concerning this duo and how they shape the foundations of sciences and humanities our thoughts and the very nature of reality itself
