whether it is in a cockpit at takeoff or the planning of an offensive war a romantic relationship or a dispute at the office there are many opportunities to lie and self deceive but deceit and self deception carry the costs of being alienated from reality and can lead to disaster so why does deception play such a prominent role in our everyday lives in short why do we deceive in his bold new work prominent biological theorist robert trivers unflinchingly argues that self deception evolved in the service of deceit the better to fool others we do it for biological reasons in order to help us survive and procreate from viruses mimicking host behavior to humans misremembering sometimes intentionally the details of a quarrel science has proven that the deceptive one can always outwit the masses but we undertake this deception at our own peril trivers has written an ambitious investigation into the evolutionary logic of lying and the costs of leaving it unchecked

mitchell and thompson have compiled the first interdisciplinary study of deception and its manifestations in a variety of animal species deception is unique in that it presents detailed explorations of the broadest array of deceptive behavior ranging from deceptive signaling in fireflies and stomatopods to false alarm calling by birds and foxes to playful manipulating between people and dogs to deceiving within intimate human relationships it offers a historical overview of the problem of deception in related fields of animal behavior philosophical analyses of the meaning and significance of deception in evolutionary and psychological theories and diverse perspectives on deception philosophical ecological evolutionary ethological developmental psychological anthropological and historical the contributions gathered herein afford scientists the opportunity to discover something about the formal properties of deception enabling them to explore and evaluate the belief that one set of descriptive and perhaps explanatory structures is suitable for both biological and psychological phenomena

issues bearing on lying and deception impact every act of communication we undertake and our evaluation and analysis of every message we process

the history of science abounds with momentous theories that disrupted conventional wisdom and yet were eventually proven true ajit varki and danny brower s mind over reality theory is poised to be one such idea a concept that runs counter to commonly held notions about human evolution but that may hold the key to understanding why humans evolved as we did leaving all other related species far behind at a chance meeting in 2005 brower a geneticist posed an unusual idea to varki that he believed could explain the origins of human uniqueness among the world s species why is there no humanlike elephant or humanlike dolphin despite millions of years of evolutionary opportunity why is it that humans alone can understand the minds of others haunted by their encounter varki tried years later to contact brower only to discover that he had died unexpectedly inspired by an incomplete manuscript brower left behind denial presents a radical new theory on the origins of our species it was not the authors argue a biological leap that set humanity apart from other species but a psychological one namely the uniquely human ability to deny reality in the face of inarguable evidence including the willful ignorance of our own inevitable deaths the awareness of our own mortality could have caused anxieties that resulted in our avoiding the risks of competing to procreate an evolutionary dead end humans therefore needed to evolve a

mechanism for overcoming this hurdle the denial of reality as a consequence of this evolutionary quirk we now deny any aspects of reality that are not to our liking we smoke cigarettes eat unhealthy foods and avoid exercise knowing these habits are a prescription for an early death and so what has worked to establish our species could be our undoing if we continue to deny the consequences of unrealistic approaches to everything from personal health to financial risk taking to climate change on the other hand reality denial affords us many valuable attributes such as optimism confidence and courage in the face of long odds presented in homage to brower s original thinking denial offers a powerful warning about the dangers inherent in our remarkable ability to ignore reality a gift that will either lead to our downfall or continue to be our greatest asset

this book systematically explores the moral issues surrounding self deception while many articles and books have been written on the concept of self deception in recent years martin s gives much greater emphasis to self deception as a significant topic for both ethical theory and applied ethics self deception is perplexing from a moral point of view it seems tailor made to camouflage and foster immorality does all self deception involve some guilt and is it among the most abhorrent evils as some moralists and theologians have charged or is it only wrong sometimes such as when it has bad consequences could it on occasion be permissible

or even desirable to deceive ourselves just as we are sometimes justified in deceiving other people are self deceivers perhaps more like innocent victims than perpetrators of deceit and as such deserving of compassion and help or paradoxically are they best viewed with ambivalence culpable as deceivers and simultaneously innocent as victims of deception from the introduction martin develops a conception of self deception as the purposeful evasion of acknowledging to oneself truths or one's view of truth he details a systematic framework for understanding the main moral perspectives and traditions concerning self deception that have emerged in western philosophy in so doing he clarifies related concepts like sincerity authenticity honesty hypocrisy weakness of will and self understanding ranging across traditions both philosophical kant kierkegaard and sartre and non philosophical freud eugene o neill and henrik ibsen martin shows why self deception is as morally complex as any other major form of behavior the appeal of this book is broad the volume will challenge professional philosophers and psychologists yet it is organized and written to be accessible to students in courses on ethics philosophy of mind and philosophy of literature martin's numerous literary examples should also interest literary critics

deceit lying and falsehoods lie at the very heart of our cultural heritage even the founding myth of the judeo christian tradition the story of adam and eve revolves around a lie we have been talking writing and singing about deception ever since eve told god the serpent deceived me and i ate our seemingly insatiable appetite for stories of deception spans the extremes of culture from king lear to little red riding hood retaining a grip on our imaginations despite endless repetition these tales of deception are so enthralling because they speak to something fundamental in the human condition the ever present possibility of deceit is a crucial dimension of all human relationships even the most central our relationships with our very own selves now for the first time philosopher and evolutionary psychologist david livingstone smith elucidates the essential role that deception and self

deception have played in human and animal evolution and shows that the very structure of our minds has been shaped from our earliest beginnings by the need to deceive. Smith shows us that by examining the stories we tell, the falsehoods we weave, and the unconscious signals we send out, we can learn much about ourselves and how our minds work. Readers of Richard Dawkins and Steven Pinker will find much to intrigue them in this fascinating book which declares that our extraordinary ability to deceive others and even our own selves lies at the heart of our humanity.

Using indisputable scientific facts, the author diagnoses the reasons for world problems of health, hatred, wars, and provides the magical prescription to cure all individuals and world problems.

Self Deception and the Common Life investigates the topic of self-deception from three points of view: philosophical, psychology, ethics, and theology. Empirical evidence and an ordinary language analysis support the case that the linguistic expression self-deception is literally meaningful and that the language of the common life can be trusted after critically analyzing the cognition translation and action accounts along with the contributions of Freud and Sartre. Steffen proposes a new synthetic emotional perception account, one that avoids paradox, giving attention to relevant moral issues. He argues that self-deception is not immoral but represents a peculiar form of akrasia. Finally, because theologians employ self-deception to describe the cognitive component of sin, Steffen considers the logic of theological self-

deception his study seeks an intimate acquaintance with self deception and exemplifies a method of analysis relevant to constructive theological inquiry

walter gratzer s themes in the stories he relates in this book are collective delusion and human folly science is generally seen as a process bound by rigorous rules which its practitioners must not transgress deliberate fraud occasionally intrudes but it is soon detected the perpetrators cast out and the course of discovery barely disturbed far more interesting are the outbreaks of self delusion that from time to time afflict upright and competent researchers and then spread like an epidemic or mass hysteria through a sober and respectable scientific community when this happens the rules by which scientists normally govern their working lives are suddenly suspended sometimes these episodes are provoked by personal vanity an unwillingness to acknowledge error or even contemplate the possibility that a hard won success is a will o the wisp at other times they stem from loyalty to a respected and trusted guru or even from patriotic pride and worst of all they may be a consequence of a political ideology which imposes its own interpretation on scientists observations of the natural world unreason and credulity supervene illusory phenomena are described and measured and theories are developed to explain them until suddenly often for no single reason the bubble bursts leaving behind it a residue of acrimony recrimination embarrassment and ruined reputations here then are radiations measured with high precision yet existing only in the minds of those who observed them the russian water which some thought might congeal the oceans phantom diseases that called for heroic surgery monkey testis implants that restored the sexual powers of ageing rouses and of tired sheep truths about genetics and about the nature of matter perceptible only to aryan scientists in the third reich or marxist ideologues in the soviet union and much more the undergrowth of science explores in terms accessible to the lay reader the history of such episodes up to our own time in all their absurdity tragedy and pathos
