in celebration of haim brezis s 60th birthday a conference was held at the ecole

polytechnique in paris with a program testifying to brezis s wide ranging influence on nonlinear analysis and partial differential equations the articles in this volume are primarily from that conference they present a rare view of the state of the art of many aspects of nonlinear pdes as well as describe new directions that are being opened up in this field the articles written by mathematicians at the center of current developments provide somewhat more personal views of the important developments and challenges

it is difficult to overestimate the importance of mathematical investigation of balance laws they arise in many areas of physics mechanics chemistry biology social sciences in this collective book we concentrate in particular on the equations of continuous medium and related to them as a rule they are very complicated in their primitive form an important feature of such equations is a possible formation of singularities even in initially smooth solution within a finite time the structure of the singularities can be very complex a natural step in the approach to this problem is the transition despite the three dimensionality of our world to spatially one dimensional model significant progress has been achieved in this direction unfortunately the methods of the one dimensional theory as usual cannot be adapted to a case of many spatial variables however there are many attempts to deal with multidimensional problems we would like to present some of them all of the papers are written by outstanding experts representing various schools in mathematics and mechanics each paper is organised as follows it contains an elementary as far as it is possible introduction to a problem a brief review of previously published results and then original results of the authors are presented

this book constitutes the proceedings of the 19th international conference on logic for programming artificial intelligence and reasoning lpar 19 held in december 2013 in stellenbosch south africa the 44 regular papers and 8 tool descriptions and experimental papers included in this volume were carefully reviewed and selected from 152 submissions the series of international conferences on logic for programming artificial intelligence and reasoning lpar is a forum where year after year some of the most renowned researchers in the areas of logic automated reasoning computational logic programming languages and their applications come to present cutting edge results to discuss advances in these fields and to exchange ideas in a scientifically emerging part of the world

service technologies are redefining the way that large and small companies are doing business and exchanging information due to the critical need for furthering automation engagement and efficiency systems and workflows are becoming increasingly more web based services concepts methodologies tools and applications is an innovative reference source that examines relevant theoretical frameworks current practice guidelines industry standards and standardization and the latest empirical research findings in web services highlighting a range of topics such as cloud computing quality of service and semantic web this multi volume book is designed for computer engineers it specialists software designers professionals researchers and upper level students interested in web services architecture frameworks and security

many smart phone users reap the benefits of location based services while tracking users positions using their smart phone is an issue of concern for some others who use foursquare or rely on their android gps view location based services as a necessity ubiquitous positioning and mobile location based services in smart phones explores new research in smart phones with an emphasis on positioning solutions in smart phones smart phone based navigation applications mobile geographical information systems and related standards

this conference focuses on practical applications of computers to system operations problems and to specific aspects of power generation and distribution the optimal power flow for economic operations is examined in several sessions also presented are computational approaches to distribution dynamics of voltage stability reactive power and harmonic power load corrections

the emerging technology of multisensor data fusion has a wide range of applications both in department of defense dod areas and in the civilian arena the techniques of multisensor data fusion draw from an equally broad range of disciplines including artificial intelligence pattern recognition and statistical estimation with the rapid evolut
