the index of refraction of an argon plasma produced by a free burning electric arc was measured by a differential interferometer the interferometer is based upon the wollaston prism and is easy to set up and align one wollaston prism splits the beam to provide path separation of the light through the arc another wollaston is required to produce the interference fringes integration of the fringe deflections and inversion of an abel integral equation yields the index of refraction of the arc referenced to the index of refraction of the surrounding air theory of the interferometer and certain inherent errors of the device are presented the data reduction method is described and examples of raw data and results

are presented the value of refractive index minus one was found for 5463 a light the accuracy of the method is currently limited by insufficient knowledge of the reference air temperature author
