everything in our world can be interpreted as a sign this opens up the question how do we proceed from semantics to pragmatics from
 theory to practice and vice versa what is the nature of the relation between interpretation action and reality and what can we learn by
 viewing economics and the economy through this lens this volume gathers together a broad range of scholars in order to address issues
 relating to the intersection of economics and semiotic theory using concepts from the fields of economics and semiotics the
 contributors to this volume revisit past and present theories and reinterpret models of thought and expression to show that our
 preconceptions about the economy can be fruitfully challenged and gain depth through a semiotic lens the application of the semiotics
 approach to economics discourse is vital in helping us to examine topics that range from theory and economic history to the

development of key economic ideas and concepts the volume aims to enhance our understanding of how economic agents act and our conceptualization of the economy and its cultural products can be reimagined this volume will be of great interest to economists literary scholars and students in the humanities

this book arose from our conviction that the nns dsge approach to the analysis of aggregate market outcomes is fundamentally flawed the practice of overcoming the smd result by recurring to a fictitious ra leads to insurmountable methodological problems and lies at the root of dsge models failure to satisfactorily explain real world features like exchange rate and banking crises bubbles and herding in financial markets swings in the sentiment of consumers and entrepreneurs asymmetries and persistence in aggregate variables and so on at odds with this view our critique rests on the premise that any modern macroeconomy should be modeled instead as a complex system of heterogeneous interacting individuals acting adaptively and autonomously according to simple and empirically validated rules of thumb we call our proposed approach bottom up adaptive macroeconomics bam the reason why we claim that the contents of this book can be inscribed in the realm of macroeconomics is threefold i we are looking for a framework that helps us to think coherently about the interrelationships among two or more markets in what follows in particular three markets will be considered the markets for goods labor and loanable funds in this respect real time matters what happens in one market depends on what has happened on what is happening or on what will happen in other markets this implies that intertemporal coordination issues cannot be ignored ii eventually it s all about prices and quantities however we are mostly interested in aggregate prices and quantities that is indexes built from the dispersed outcomes of the decentralized transactions of a large population of heterogeneous individuals each individual acts purposefully but she knows anything about the levels of prices and quantities which clear markets in the aggregate iii in the hope of being allowed to purport scientific claims bam relies on the assumption that individual purposeful behaviours aggregates into regularities macro behaviour however can depart radically from what the individual units are trying to accomplish it is in this sense that aggregate outcomes emerge from individual actions and interactions
