this book provides the knowledge of the newly established supertrigonometric and superhyperbolic functions with the special functions such as mittag leffler wiman prabhakar miller ross rabotnov lorenzo hartley sonine wright and kohltrausch williams watts functions gauss hypergeometric series and clausen hypergeometric series the special functions can be considered to represent a great many of the real world phenomena in mathematical physics engineering and other applied sciences the audience benefits of new and original information and references in the areas of the special functions applied to model the complex problems with the power law behaviors the results are important and interesting for scientists and engineers to represent the complex phenomena arising in applied sciences therefore graduate students and researchers in mathematics physics and engineering might find this book appealing

about the first edition the text is geared to the needs of the beginning graduate student covering with complete well written proofs the usual major branches of groups rings fields and modules n one of the material one expects in a book like this is missing and the level of detail is appropriate for its intended audience alberto delgado mathscinet this text promotes the conceptual understanding of algebra as a whole and that with great methodological mastery although the presentation is predominantly abstract it nevertheless features a careful selection of important examples together with a remarkably detailed and strategically skillful elaboration of the more sophisticated abstract theories werner kleinert zentralblatt for the new edition the author has completely rewritten the text reorganized many of the sections and even cut or shortened material which is no longer essential he has added a chapter on ext and tor as well as a bit of topology

first published in 1997 routledge is an imprint of taylor francis an informa company

boundary value problems on bounded or unbounded intervals involving two or more coupled systems of nonlinear differential and integral equations with full nonlinearities are scarce in the literature the present work by the authors desires to fill this gap the systems covered here include differential and integral equations of hammerstein type with boundary constraints on bounded or unbounded intervals these are presented in several forms and conditions three points mixed with functional dependence homoclinic and heteroclinic amongst others this would be the first time that differential and integral coupled systems are studied systematically the existence and in some cases the localization of the solutions are carried out in banach space following several types of arguments and approaches such as schauder s fixed point theorem or guo krasnosel ski fixed point theorem in cones allied to green s function or its estimates lower and upper solutions convenient truncatures the nagumo condition presented in different forms the concept of equiconvergence carathéodory functions and sequences moreover the final part in the volume features some techniques on how to relate differential coupled systems to integral ones which require less regularity parallel to the theoretical explanation of this work there is a range of practical examples and applications involving real phenomena focusing on physics mechanics biology forestry and dynamical systems which researchers and students will find useful
