semiotics as a tool for learning mathematics is a collection of ten theoretical and empirical chapters from researchers all over the world who are interested in semiotic notions and their practical uses in mathematics classrooms collectively they present a semiotic contribution to enhance pedagogical aspects both for the teaching of school mathematics and for the preparation of pre service teachers this enhancement involves the use of diagrams to visualize implicit or explicit mathematical relations and the use of mathematical discourse to facilitate the emergence of inferential reasoning in the process of argumentation it will also facilitate the construction of proofs and solutions of mathematical problems as well as the progressive construction of mathematical conceptions that eventually will approximate the concepts encoded in mathematical symbols these symbols hinge not only of mental operations but also on indexical and iconic aspects aspects which often are not taken into account when working on the meaning of mathematical symbols for such an enhancement to happen it is necessary to transform basic notions of semiotic theories to make them usable for mathematics education in addition it is also necessary to back theoretical claims with empirical data this anthology attempts to deal with such a conjunction overall this book can be used as a theoretical basis for further semiotic considerations as well as for the design of different ways of teaching mathematical concepts
