this book constitutes the refereed proceedings of the 26th international symposium on mathematical foundations of computer science mfcs 2001 held in marianske lazne czech republic in august 2001 the 51 revised full papers presented together with 10 invited contributions were carefully reviewed and selected from a total of 118 submissions all current aspects of theoretical computer science are addressed ranging from mathematical logic and programming theory to algorithms discrete mathematics and complexity theory besides classical issues modern topics like quantum computing are discussed as well

industrial development of software systems needs to be guided by recognized engineering principles commercial off the shelf cots components enable the systematic and cost effective reuse of prefabricated tested parts a characteristic approach of mature engineering disciplines this reuse necessitates a thorough test of these components to make sure that each works as specified in a real context beydeda and gruhn invited leading researchers in the area of component testing to contribute to this monograph which covers all related aspects from

testing components in a context independent manner through testing components in the context of a specific system to testing complete systems built from different components the authors take the viewpoints of both component developers and component users and their contributions encompass functional requirements such as correctness and functionality compliance as well as non functional requirements like performance and robustness overall this monograph offers researchers graduate students and advanced professionals a unique and comprehensive overview of the state of the art in testing cots components and cots based systems

introduced forty years ago relational databases proved unusually succe ful and durable however relational database systems were not designed for modern applications and computers as a result specialized database systems now proliferate trying to capture various pieces of the database market database research is pulled into di erent directions and speci ized database conferences are created yet the current chaos in databases is likely only temporary because every technology including databases becomes standardized over time the history of databases shows periods of chaos followed by periods of dominant technologies for example in the early days of computing users stored their data in text les in any format and organization they wanted these early days were followed by information retrieval systems which required some structure for text documents such as a title authors and a publisher the information retrieval systems were followed by database systems which added even more structure to the data and made querying easier in the late 1990s the emergence of the internet brought a period of relative chaos and interest in unstructured and semistructured data as it wasenvisionedthateverywebpagewouldbelikeapageinabook however with the growing maturity of the internet the interest in structured data was regained because the most popular websites are in fact based on databases the question is not whether future data stores need structure but what structure they need

sheet and film processes include coating papermaking metal rolling and polymer film extrusion products produced by these processes include paper bumper stickers plastic bags windshield safety glass and sheet metal the total capitalization of industries that rely on these processes is well over 500 billion worldwide these processes are notorious for being difficult to control the goal of this book is to present the theoretical background and practical techniques for the identification and control of sheet and film processes it is explained why many existing industrial control systems perform poorly for sheet and film processes identification and control algorithms are described and illustrated which provide consistent and reliable product quality these algorithms include an experimental design technique that ensures that informative data are collected during input output experimentation model identification techniques that produce a process model and an estimate of its accuracy and control techniques that take into account actuator constraints as well as robustness to model uncertainties the algorithms covered in this book are truly the state of the art variations on some of the algorithms have been implemented on industrial sheet and film processes other algorithms are in various stages of implementation all of the algorithms have been applied to realistic simulation models constructed from industrial plant data many of these studies are included in this book

neither art nor philosophy was kind to beauty during the twentieth century much modern art disdains beauty and

many philosophers deeply suspect that beauty merely paints over or distracts us from horrors intellectuals consigned the passions of beauty to the margins replacing them with the anemic and rarefied alternative aesthetic pleasure in only a promise of happiness alexander nehamas reclaims beauty from its critics he seeks to restore its place in art to reestablish the connections among art beauty and desire and to show that the values of art independently of their moral worth are equally crucial to the rest of life nehamas makes his case with characteristic grace sensitivity and philosophical depth supporting his arguments with searching studies of art and literature high and low from thomas mann s death in venice and manet s olympia to television throughout the discussion of artworks is generously illustrated beauty nehamas concludes may depend on appearance but this does not make it superficial the perception of beauty manifests a hope that life would be better if the object of beauty were part of it this hope can shape and direct our lives for better or worse we may discover misery in pursuit of beauty or find that beauty offers no more than a tantalizing promise of happiness but if beauty is always dangerous it is also a pressing human concern that we must seek to understand and not suppress
