Suzanne Keene's pioneering book shows how museums and other cultural organizations fit into the new world of information and electronic communications and most importantly how they can take advantage of what it has to offer by using new technology. Museums can build knowledge bases around information about collections. A collection object can be the central link for information about past and present places, people and concepts. Technologies, ways of working and evidence of the natural world digital collections explains how this vision can be realized. Sound, video and animations can be digitized and developed as a central resource that can be drawn on for many varied access routes via the world wide CD ROMs through on gallery screens and other future products still in development. These technological capabilities raise many compelling issues that need to be understood in order to successfully develop information collections. In this book Suzanne Keene reviews these issues clearly and comprehensively. Her accompanying click through guide provides the latest news and links to internet information. Suzanne Keene is a senior manager of museum collections and information at the Science Museum London. She led the UK LASSI project to select a collections information system for UK museums. This with her experience in directing information technology and multimedia projects means that she is accustomed to translating the highly technical concepts of information technology into high level issues for senior and strategic management.

In this book the authors analyze big data on global interdependence caused by the flows of commodities, money and people using a network science approach to obtain differing views of globalization and to clarify the facts on isolation of communities. Globalization reduces international economic inequality in that it allows emerging countries to catch up while it increases relative poverty in some advanced countries. How should this trade off between international and domestic inequalities be resolved at the same time the reduction of biocultural diversity caused by globalization needs to be avoided? What kind of change is required in local communities to conserve biocultural diversity on the issue of commodity flow research results of the supply chain network isolation in industry and resource flows and stocks are presented in this book. For monetary flow ownership networks, value added networks and profit shifting were studied and regarding the flow of people linkage of ethnic groups, immigrant assimilation and refugees were examined based on the resulting view of globalization and isolation the development of the isolation index using machine learning is discussed. Finally recommendations for evidence based policymaking in the United Nations are considered.
