the latest in these popular camera guides magic lantern guides sony a500 a550 will help owners of this model to maximize its potential this camera features a tiltable 3 inch lcd that displays fastest possible autofocus in live view mode due to phase detection af system a sony exclusive this guide offers comprehensive information on how to use this camera packed with

diagrams instructions and tips magic lantern has become the world's most popular brand of camera guide it is sturdy well produced with laminated covers for long life and in a handy size for portability

smartphones from an applied research perspective highlights latest advancements of research undertaken in multidisciplinary fields where the smartphone plays a central role smartphone is synonymous to innovation in today's society very few visionaries predicted its social cultural technological and economic impacts although the usage of smartphone is almost pervasive and transcendental this book is meant for researchers and postgraduate students looking forward for hot topics for their final year projects doctoral or even postdoctoral studies practitioners too will find food for thought and will surely be amazed by the broadness of the topics presented

quantifying temporal changes in plant geometry as a result of genetic developmental or environmental causes is essential to improve our understanding of the structure and function relationships in plants over the last decades optical imaging and remote sensing developed fundamental working tools to monitor and quantify our environment and plants in particular increased efficiency of methods lowered the barrier to compare integrate and interpret the optically obtained plant data across larger spatial scales and across scales of biological organization in particular acquisition speed at high resolutions reached levels that allow capturing the temporal dynamics in plants in three dimensions along with multi spectral information beyond human visual senses these advanced imaging capabilities have proven to be essential to detect and focus on analyzing temporal dynamics of plant geometries the focus of this research topic is on optical techniques developed to study geometrical changes at the plant level detected within the wavelength spectrum between near uv to near infrared such techniques typically involve photogrammetric lidar or imaging spectroscopy approaches but are not exclusively restricted to these instruments operating within this range of

wavelengths allow capturing a wide range of temporal scales ranging from sub second to seasonal changes that result from plant development environmental effects like wind and heat or genetically controlled adaption to environmental conditions the research topic covered a plethora of methodological approaches as suggestions for best practices in the light of a particular research question and to a wider view to different research disciplines and how they utilize their state of the art techniques in demonstrating potential use cases across different scales
