a number of years ago something incredible an amazing coincidence happened that started doctor warrick bishop on the mission to prevent heart attacks rather than try to cure them he was driving to work one day when he stopped at a commotion by the side of the road a fun runner had collapsed during a fun run with a heart attack he helped in his resuscitation only to find out that had seen the very same man two years earlier and reassured him that he was fine warrick had missed the chance to make a difference and it nearly cost a life based on risk calculation and the best practice of the time he shouldn't have been at high risk but he was this important question started him on a journey which meant he was open to looking more closely at new and emerging technology to help in being more precise about the risk of heart attack what if we could plan not to have a heart attack heart attack is a layman's term referring to a narrowing or blockage of the coronary arteries that can kill or requires some form of medical intervention such as medication time in a hospital balloons or stents or coronary artery bypass grafting as a cardiologist i have not yet met a patient who expected to have a problem patients do not put into their diaries possible problem with my heart next week yet what if we could be forewarned about or prepared for a potential problem with our coronary arteries what if we were able to put in place preventative measures that may avert a problem what if we were able to take away the surprise of a heart attack occurring out of the blue and replace possible fear with prepared understanding

appendix contains a glossary of test terms

have you planned your heart attack is not the next optimistic self help heart disease reversal low carb cure all approach to health believing that prevention is better than cure it presents a proactive approach to cardiac disease prevention it is the first of its kind offering a balanced and referenced discussion of coronary risk assessment using modern technology taking a picture of the coronary arteries using ct to see the health of the arteries is not new it just isn't being done routinely yet by using these advances you can be ahead of the game about your own cardiovascular health wouldn't you want to know rather than guess if the single biggest killer in the western world was lurking inside of you we all know friends and family members who have suffered a heart attack who live with angina or endure shortness of breath a disease has developed this book explores how we might be able to prevent the disease especially a heart attack from occurring in the first

place treatment for risk prior to an event is primary prevention the focus of have you planned your heart attack until recent times primary prevention largely involved treatment of the unknown historically risk assessment has been based on a number of factors observed in a population or number of people this observational data includes increasing age being male increased blood pressure and smoking now today s technology also allows us to look at the health of an individual s coronary arteries in exquisite detail the use of ct imaging before the onset of a problem is a paradigm shift in the conventional management of heart disease although formalised guidelines or recommendations do not exist for some of the issues covered in the book a logical and systematic approach based on the science that is available today allows us to looking more broadly at our understanding and application of preventative cardiology image information combined with the information gained from the historically used traditional risk factors allow specialists general practitioners and patients to be ahead of the development of coronary artery disease so that measures to reduce risk can be implemented although cardiac ct imaging has been readily available for the past five to 10 years it has not been broadly taken up the hope from this book is to begin a conversation which ultimately increases utilisation of cardiac ct imaging in combination with other risk factor evaluation to improve primary prevention for coronary artery disease its vision is that imaging will be incorporated into a more holistic approach thus improving the way we deal with the potential risk many individuals carry in regard to coronary artery disease as this technology becomes more familiar to the community then its use could be at the coalface for general practitioners who are by virtue of their position in providing medical care the custodians of preventative medicine as we are comfortable with mammography pap smears measuring cholesterol levels and blood sugar levels could we see cardiac ct imaging as one of the tools available for widespread implementation in public policy for change to occur we need conversation followed by action the information offered throughout this book is accompanied by an invitation to be part of that conversation criticism and controversy are healthy parts of vigorous conversation as too are vision passion and an enthusiasm for possibility if this book starts such conversation that opens doors to further evaluation and discussion and along the way improves medicine and saves lives then that is a good start

in addition to customary coverage of traditional topics and instruments the author provides detailed presentations for several topics not always found in other textbooks these topics include history of

psychological testing early uses and abuses of intelligence neuropsychological foundations of ability factor analysis assessment of learning disabilities consumer assessment environmental assessment and courtroom testimony

includes abstracts of magazine articles and book reviews
