time resolved optical stimulation of luminescence has become established as an important method for measurement of optically stimulated luminescence its enduring appeal is easy to see with the number of materials studied growing from the initial focus on natural minerals such as quartz and feldspar to synthetic dosimeters such as Al_2O_3 c BeO and YAl_5O_13 Mn^{2+} the aim of time resolved optical stimulation is to separate in time the stimulation and emission of luminescence the luminescence is stimulated from a sample using a brief light pulse the ensuing luminescence can be monitored either during stimulation in the presence of scattered stimulating light or after the light pulse the time resolved luminescence spectrum measured in this way can be resolved into components each with a distinct lifetime the lifetimes are linked to physical processes of luminescence and thus provide a means to study dynamics involving charge transfer between point defects in materials this book is devoted to time resolved optically stimulated luminescence

and is suitable for researchers with an interest in the study of point defects using luminescence methods the book first sets the method within the context of luminescence field at large and then provides an overview of the instrumentation used there is much attention on models for time resolved optically stimulated luminescence two of which are analytical and the third of which is based on computational simulation of experimental results to bring relevance to the discussion the book draws on examples from studies on quartz and a Al_2O_3 c two materials widely investigated using this method the book shows how kinetic analysis for various thermal effects such as thermal quenching and thermal assistance can be investigated using time resolved luminescence although use of light sums is an obvious choice for this contemporary work is discussed to show the versatility of using other alternative methods such the dynamic throughput

an introduction to lte explains the technology used by 3gpp long term evolution the book covers the whole of lte both the techniques used for radio communication between the base station and the mobile phone and the techniques used for signalling communication and data transport in the evolved packet core it avoids unnecessary detail focussing instead on conveying a sound understanding of the entire system the book is aimed at mobile telecommunication professionals who want to understand what lte is and how it works it is invaluable for engineers who are working on lte notably those who are transferring from other technologies such as umts and cdma2000 those who are experts in one part of lte but who want to understand the system as a whole and those who are new to mobile telecommunications altogether it is also relevant to those working in non technical roles such as project managers marketing executives and intellectual property consultants on completing the book the reader will have a clear understanding of lte and

will be able to tackle the more specialised books and the 3gpp specifications with confidence key features covers the latest developments in release 10 of the 3gpp specifications including the new capabilities of lte advanced includes references to individual sections of the 3gpp specifications to help readers understand the principles of each topic before going to the specifications for more detailed information requires no previous knowledge of mobile telecommunications or of the mathematical techniques that lte uses for radio transmission and reception
