plants that fight cancer second edition is a compilation that reviews cancer treatment and research based information on the plant kingdom as the source of both known and novel chemical moieties and mixtures many of them still under identification this new edition follows the organization of the first book with a considerable expansion of content that more than doubles the volume of information divided into four segments the first part is dedicated to a review of our current knowledge of cancer the different types and incidence the molecular pathways of the disease and the various treatment protocols with an emphasis on chemotherapy the second part is a brief journey in pharmacognosy with detailed information about each of the fourteen different chemical groups of plant secondary metabolites their use in cancer chemotherapy and updated information on the biotechnological production of the most representative compounds in clinical practice the third part of the book comprises six chapters dedicated to either plant chemotherapeutical approaches to specific cancer types e g bladder prostate or specific groups of plant secondary metabolites with novel and promising properties for cancer treatment e g naphthoquinones lectins phenanthridone alkaloids the fourth part containing investigative information on almost 300 individual plant species with established anticancer properties either on a clinical or in vitro level is with no doubt the most analytical this new edition contains chapters on cytotoxic phenanthridone alkaloid constituents of the amaryllidaceae naphthoquinone contained anticancer terrestrial plants polyphenols and cancer immunology medicinal plant product based fabrication nanoparticles au and ag and their anticancer effects bladder and prostate cancer and plant lectins in cancer treatment features provides efficient information for all kinds of cancer and plant chemotherapeutical approaches to specific cancer types discusses specific groups of plant secondary metabolites with novel and promising properties for cancer treatment provides scientific information for medicinal uses of various plants contains analytical information on almost 300 individual plant species with established anticancer properties either on a clinical or in vitro level focuses on plant genera and species that are either already used in cancer chemotherapy or have been identified with antitumor and antileukemic properties to a bigger or lesser extent

in 2007 the first edition of handbook of plant nutrition presented a compendium of information on the mineral nutrition of plants available at that time and became a bestseller and trusted resource updated to reflect recent advances in knowledge of plant nutrition the second edition continues this tradition with chapters written by a new team o

2008 nominee the council on botanical and horticultural libraries annual award for a significant work in botanical or horticultural literature from medicinal industrial and culinary uses to cutting edge laboratory techniques in modern research and plant conservation strategies natural products from plants second edition reveals a vastly expanded understanding of the natural products that plants produce in a single volume this book offers a thorough inventory of the various types of plant derived compounds it covers their chemical composition structure and properties alongside the most effective ways to identify extract analyze and characterize new plant derived compounds the authors examine new information on the chemical mechanisms plants use to deter predators and pathogens attract symbiotic organisms and defend themselves against environmental stress insights which are key for adapting such mechanisms to human health along with updated and revised information from the highly acclaimed first edition the second edition presents seven new chapters

and features more than 50 new material relating to plant constituents natural product biochemistry and molecular biology the book incorporates in depth treatment of natural product biosynthesis with new collection and extraction protocols advanced separation and analytical techniques up to date bioassays as well as modern molecular biology and plant biotechnology for the production of natural products unique in its breadth and coverage natural products from plants second edition belongs on the shelf of interested researchers policymakers and consumers particularly those involved in disease prevention treatment and pharmaceutical applications who need a complete guide to the properties uses and study of plant natural products

explores the molecular biochemical functional structural and developmental mechanisms of pH in plant growth examines the role of pH in plant symplasm plant apoplasm the rhizosphere the ecosystem and plant interaction with biotic and abiotic environments

plant biotechnology has created unprecedented opportunities for the manipulation of biological systems of plants to understand biotechnology it is essential to know the basic aspects of genes and their organization in the genome of plant cells this text on the subject is aimed at students

with contributions from experts in various specialties plant environment interactions discusses recent advances in cellular and molecular regulation of stress tolerance this third edition reviews new research in stress signal perception cellular mechanisms and genetic manipulation of stress tolerance for each individual stress it addresses how to evaluate the level of plant tolerance to stress as well as how to link mechanisms identified through analysis of plant environment interaction to producing stress tolerant germplasm through biotechnology and traditional breeding it also examines environmental stresses limiting plant productivity in agriculture horticulture and forestry
