understanding human nature the psychology of personality is a seminal work by alfred adler an austrian psychiatrist and psychotherapist published in 1927 this book presents adler s theories on personality and human behavior which laid the foundation for the school of individual psychology in the book adler explores the fundamental aspects of human nature including the dynamics of personality development the influence of social factors and the significance of individual experiences and perceptions he emphasizes the importance of understanding the subjective experiences of individuals and how they shape their behavior and worldview one of adler s key concepts is the inferiority complex which he argues is a driving force behind human behavior he suggests that individuals strive for superiority to overcome feelings of inferiority and that these efforts shape their personality and motivations understanding human nature offers insights into various aspects of human psychology including the formation of

personality traits the role of early childhood experiences and the impact of societal influences adler's holistic approach to understanding human behavior continues to influence psychology and psychotherapy to this day

the notion of human nature is often called upon to carry the burden of a great number of arguments i all men we are told are motivated to action by the same basic desires needs instincts drives unity is given to a great variety of human behaviour if we see them as emanating from a single source ii given that human nature is what it is then social institutions and political organisations ought to be such and such human nature is the one unchangeable constant in a varying social system iii given that human nature describes certain basic and common needs then the good man is a man that has had these needs satisfied just as a good plant is one that has had its needs satisfied good and bad are determined in terms of the basic human requirements theories of human nature therefore have powerful consequences it is important that one should be clear about what exactly is involved in this notion of a human nature statements that assert something about the nature or essence of man are by no means restricted to philosophers we have on the one hand the traditional and largely speculative claims of plato hobbes and rousseau but we have also the more scientific claims of psychologists freud maslow fromm and anthropologists lorenz ardrey morris psychologists and anthropologists claim new insights for why we do the things that we do they give explanations of human behaviour in terms of general and basic laws these generalisations turn out to be descriptions of human nature i argue that the scientific enterprise of formulating such general laws for the purpose of explaining human action is radically misconceived how does the human nature theorist arrive at his theory that is how is one supposed to make this discovery about a human essence what do we look for where do we look for it and how do we go about discovering it these are important questions that need to be asked of both the psychologist and the anthropologist they will lead us to both a clearer understanding of the kind of argument involved in their claims and will also bring to the forefront the underlying assumptions in their position human nature theorists employ a number of terms that seem to be essential to the theories terms like desire need drive and instinct function as primary elements because any formulation of a general law that purports to have explanatory force with regards to human behaviour must employ terms that are generally and ordinarily employed to explain particular actions explanation of human behaviour by reference to the general law achieves a certain plausibility by giving the impression of doing what we ordinarily do when we explain another's behaviour while at the same time claiming scientific status for the explanation concentrating therefore in particular on the psychologist's use of need viz maslow all men need love and the anthropologist's use of instinct viz ardrey and morris all men are born with the instinct for aggression i attempt to show that these scientific explanations of human behaviour are incoherent for they depend on the ordinary use of these terms to achieve plausibility while at the same time they depend on a scientific use to legitimise their conclusions

our views on human nature are fundamental to the whole development indeed the whole future of human society originally published in 1974 professor thorpe believed that this was one of the most important and significant topics to which a biologist can address himself and in this book he attempts a synthetic view of the nature of man and animal based on the five disciplines of physiology ethology genetics psychology and philosophy in a masterly survey of the natural order he shows the animal world as part of yet distinct from the inanimate world he then treats aspects of the animal world which approach the human world in behaviour and capabilities examining simple organisms communications in vertebrates and invertebrates innate behaviour versus acquired behaviour and animal perception in the second part of the book he deals with those aspects of human nature for which there is no analogy and which constitute man s uniqueness his consciousness of his past his awareness of his future and his desire to understand the meaning of his existence the primary facts which demonstrate the importance of this book arise from the ever growing power of man over his environment and his apparent inability to foresee and cope with the dangers of uncontrolled population growth on the one hand and the wildly irrational waste and degradation of the natural resources of the world on the other professor thorpe believes that an immense responsibility lies with literate men of good will particularly scientists to convince man that he is the spearhead and custodian of a stupendous evolutionary process animal nature and human nature integrates scientific fact with sound theological thought in an attempt to fulfil in a manner previously impossible pascal s injunction that it is dangerous to show man too clearly how much he resembles the beast without at the same time showing him his greatness it is also dangerous to allow him too clear a vision of his greatness without his baseness it is even more dangerous to leave him in ignorance of both but it is very profitable to show him both
