the theory of trees has its origin in the work of lyndon on length functions in groups the first definition of an r tree was given

by Tits in 1977 the importance of trees was established by Morgan and Shalen who showed how to compactify a generalisation of Teichmüller space for a finitely generated group using r trees. In that work they were led to define the idea of a tree where r is an arbitrary ordered abelian group. Since then there has been much progress in understanding the structure of groups acting on r trees. Notably, the Rips theorem on free actions, there has also been some progress for certain other ordered abelian groups, including some interesting connections with model theory. Introduction to trees will prove to be useful for mathematicians and research students in algebra and topology.
