most of our students neither know how learning works nor what they have to do to ensure it to the detriment both of their studies and their development as lifelong learners the point of departure for this book is the literature on self regulated learning that tells us

that deep lasting independent learning requires learners to bring into play a range of cognitive skills affective attitudes and even physical activities about which most students are wholly unaware and that self regulation which has little to do with measured intelligence can be developed by just about anyone and is a fundamental prerequisite of academic success linda nilson provides the theoretical background to student self regulation the evidence that it enhances achievement and the strategies to help students develop it she presents an array of tested activities and assignments through which students can progressively reflect on monitor and improve their learning skills describes how they can be integrated with different course components and on various schedules and elucidates how to intentionally and seamlessly incorporate them into course design to effectively meet disciplinary and student development objectives recognizing that most faculty are unfamiliar with these strategies she also recommends how to prepare for introducing them into the classroom and adding more as instructors become more confident using them the book concludes with descriptions of courses from different fields to offer models and ideas for implementation at a time of so much concern about what our students are learning in college and how well prepared they are for the challenges of tomorrow s economy and society self regulated learning provides a reassuring solution particularly as studies indicate that struggling students benefit the most from practicing it

space is no longer the domain of national space agencies today a significant majority of space activities are carried out by non governmental entities resulting in the accelerated evolution of space technologies and their applications this operational shift from public to private does not mean however that governments are no longer relevant in this era of new space on the contrary as the operational role of the state has diminished its regulatory role has grown correspondingly acknowledging that the commercial landscape in space is an ever changing one this book explores how the canadian government has adapted to the new commercial space landscape and whether it is prepared to fulfil its authorisation and supervision responsibilities as the regulator of canada s space industry the fundamental research question posed therefore is whether canada s regulatory framework is appropriate given the increasing commercialisation of space to best answer this question the book provides a doctrinal analysis of canada s historical space policy and current space laws an empirical survey of the perspectives of those currently

interacting with Canada's regulatory framework and a comparative exploration of how other jurisdictions oversee commercial space activities motivated by legal, moral and economic considerations. The book recommends that Canada enact a comprehensive national space law and provides an annotated draft law for this purpose. By doing so, the book intends to spark a meaningful conversation on how Canada ought to fulfil its regulatory responsibilities, a topic previously unaddressed in public and academic discourse.
