for those in the broad engineering community those who employ work with and or educate engineers and engineers themselves there is no need to explain the importance and value of engineering they understand that engineers help make the world a better place for all that they regularly grapple with important societal and environmental issues and that the engineering process is every bit as creative as composing a symphony or crafting a piece of art but the situation outside the engineering community is quite different studies have shown that most k 12 students and teachers have a limited appreciation of all the ways that engineering makes their lives better and furthermore that they have little understanding of what engineers do or of the opportunities that an

engineering education offers messaging for engineering supports efforts by the engineering community to communicate more effectively about the profession and those who practice it this report builds on the 2008 nae publication changing the conversation messages for improving public understanding of engineering ctc which presented the results of a research based effort to develop and test new more effective messages about engineering the new messages cast engineering as inherently creative and concerned with human welfare as well as an emotionally satisfying calling this report summarizes progress in implementing the ctc messages but also recognizes that there is potential to galvanize additional action and thus suggests specific steps for major players in the engineering community to continue and build on progress to date many of the report s recommendations resulted from discussion at a december 2010 committee workshop that involved several dozen high level decision makers representing key stakeholder groups in the engineering community

excerpt from the calculus for engineers this book describes what has for many years been the most important part of the regular course in the calculus for mechanical and electrical engineering students at the finsbury technical college it was supplemented by easy work involving fourier spherical harmonic and bessel functions which i have been afraid to describe here because the book is already much larger than i thought it would become the students in october knew only the most elementary mathematics many of them did not know the binomial theorem or the definition of the sine of an angle in july they had not only done the work of this book but their knowledge was of a practical kind ready for use in any such engineering problems as i give here one such student mr norman endacott has corrected the manuscript and proofs he has worked out many of the exercises in the third chapter twice over i thank him here for the care he has taken and i take leave also to say that a system which has year by year produced many men

with his kind of knowledge of mathematics has a good deal to recommend it i say this through no vanity but because i wish to encourage the earnest student about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

whatever their discipline engineers are routinely called upon to develop solutions to all kinds of problems to do so effectively they need a systematic and disciplined approach that considers a range of alternatives taking into account all relevant factors before selecting the best solution in problem solving for engineers david carmichael demonstrates just such an approach involving problem definition generation of alternative solutions and ultimately the analysis and selection of a preferred solution david carmichael introduces the fundamental concepts needed to think systematically and undertake methodical problem solving he argues that the most rational way to develop a framework for problem solving is by using a systems studies viewpoint he then outlines systems methodology modeling and the various configurations for analysis synthesis and investigation building on this the book details a systematic process for problem solving and demonstrates how problem solving and decision making lie within a systems synthesis configuration carefully designed as a self learning resource the book contains exercises throughout that reinforce the material and encourage readers to think and apply the concepts it covers decision making in the presence of uncertainty and multiple criteria

including that involving sustainability with its blend of economic social and environmental considerations it also characterizes and tackles the specific problem solving of management planning and design the book provides for the first time a rational framework for problem solving with an engineering orientation
