professor hamouda's book is very timely and thought provoking and should be an eye opener for students of economics who were brought up in the anti keynesian last decades of the twentieth century or were taught the garbled rather than updated revived keynesianism which has recently become popular. y. s. brenner, retired professor of economics, utrecht university, the netherlands, contrary to the commonly perpetuated belief that keynes's theory is appropriate only to economic depressions, the author of this provocative book maintains that keynes provided a complete set of macroeconomic relations and the ingredients of a new theoretical model much more reflective of and analytically appropriate to the 21st century than those on which current macroeconomics is based. with the perspective of keynes as the backdrop, the author begins with a discussion of the characteristics of the financial crises of 2008 and the 1930s. he then goes on to show that keynes provided a novel general theory constructed as the ec-sp model, different from that of the classicals' labour theory of value model and the neoclassicals' antithetical is-lm model. a theory yet unrecognized as being behind both a treatise on money and the general theory, he presents here the premises of keynes's contributions which still await use by a generation of economists to reassess macroeconomics and orient it in a new direction. this unique and authoritative look at keynes's body of work will be an essential read for scholars and students of economics. anyone trying to understand the state of the entrepreneurial economy of which the 2008 financial crisis is but one manifestation prone to recurrence will find the work an important resource.

this book is a comprehensive analysis of property investment and the market's determination of commercial property values and investment performance. the author examines the economic forces that operate in the property market by placing property in the context of the overall investment market and the local, national and international economies. relevant concepts and principles of economics, investment and finance are identified; these are then used to explain the operation of the property market and property price determination. the text begins with a study of the stock market, identifying the principles and forces which explain the price determination of stocks and shares. these principles are then applied to commercial property investments and a simple theory is developed. the three major sectors of the property market: letting, development and investment are then analysed in depth and the pricing theory is reviewed after an examination of the influence of government intervention. the subject is synthesised by detailed studies of three of the most turbulent periods in the history of the post-second world war property market in the uk. in this second edition, both the text and illustrative examples have been updated. the theory of the market's determination of rental values and yields have been substantially revised and developed. a new chapter discussing the 1980s property boom and the 1990s collapse has been added.

traditionally, international investment law was conceptualised as a set of norms aiming to ensure good governance for foreign investors in exchange for their capital and know-how. however, the more recent narratives postulate that investment treaties and investor-state arbitration can lead to better governance, not just for foreign investors but also for host-state communities. investment treaty law can arguably foster good governance by holding host governments liable for a failure to ensure transparency, stability, predictability and consistency in their dealings with foreign investors. the recent proliferation of such narratives in investment treaty practice, arbitral awards and academic literature raises questions as to their juridical, conceptual and empirical underpinnings. what has propelled good governance from a set of normative ideals to enforceable treaty standards? does international investment law possess the necessary characteristics to inspire changes at the national level? how do host states respond to investment treaty law? the overarching objective of this monograph is to unpack existing assumptions concerning the effects of international investment law on host states by combining doctrinal, empirical, comparative analysis and unveiling the emerging nationally felt responses to international investment norms. the book aims to facilitate a more informed understanding of the present contours and the nature of the interplay between international investment norms and national realities.

the paper considers investment and growth in the middle east and north africa mena region notwithstanding cross country differences investment as a whole has been too low too heavily tilted toward the public sector too highly dependent on external influences and less productive than in many other regions improving the region's investment performance is critical if policymakers are to succeed in increasing the region's economic growth rate after discussing the relationship between investment and growth the paper analyzes the investment responsiveness of various countries in the region and notes the policy priorities for strengthening the basis for rapid and sustained economic growth
