an introduction to stochastic processes with applications to biology second edition presents the basic theory of stochastic processes necessary in understanding and applying stochastic methods to biological problems in areas such as population growth and extinction drug kinetics two species competition and predation the spread of epidemics and

a generalization of conventional matrix product cmp called the semi tensor product stp is proposed it extends the cmp to

two arbitrary matrices and maintains all fundamental properties of cmp in addition it has a pseudo commutative property which makes it more superior to cmp the stp was proposed by the authors to deal with higher dimensional data as well as multilinear mappings after over a decade of development stp has been proven to be a powerful tool in dealing with nonlinear and logical calculations this book is a comprehensive introduction to the theory of stp and its various applications including logical function fuzzy control boolean networks analysis and control of nonlinear systems amongst others

modern finite element analysis has grown into a basic mathematical tool for almost every field of engineering and the applied sciences this introductory textbook fills a gap in the literature offering a concise integrated presentation of methods applications software tools and hands on projects included are numerous exercises problems and mathematica matlab based programming projects the emphasis is on interdisciplinary applications to serve a broad audience of advanced undergraduate graduate students with different backgrounds in applied mathematics engineering physics geophysics the work may also serve as a self study reference for researchers and practitioners seeking a quick introduction to the subject for their research

as long as a branch of knowledge offers an abundance of problems it is full of vitality david hilbert over the last 15 years i have given lectures on a variety of problems in nonlinear functional analysis and its applications in doing this i have recommended to my students a number of excellent monographs devoted to specialized topics but there was no complete survey type exposition of nonlinear functional analysis making available a quick survey to the wide range of readers including mathematicians natural scientists and engineers who have only an elementary knowledge of linear functional analysis i have tried to close this gap with my five part lecture notes the first three parts of which have been published in the

teubner texte series by teubner verlag leipzig 1976 1977 and 1978 the present english edition was translated from a completely rewritten manuscript which is significantly longer than the original version in the teubner texte series the material is organized in the following way part i fixed point theorems part ii monotone operators part iii variational methods and optimization parts iv jv applications to mathematical physics the exposition is guided by the following considerations a what are the supporting basic ideas and what intrinsic interrelations exist between them 3 in what relation do the basic ideas stand to the known propositions of classical analysis and linear functional analysis y what typical applications are there vii preface viii special emphasis is placed on motivation

designed for the newest version of the popular matlab software program matlab an introduction with applications 3 e requires no previous knowledge of computer programming the first chapter describes basic features of the program and shows how to use it in simple arithmetic operations with scalars the next two chapters focus on the topic of arrays the basis of matlab while the remaining text covers a wide range of other applications computer screens tutorials samples and homework questions in math science and engineering provide the student with the practical hands on experience needed for total proficiency

at the beginning of the twenty first century the demand for anthropological approaches understandings and methodologies outside academic departments is shifting and changing through a series of fascinating case studies of anthropologists experiences of working with very diverse organizations in the private and public sector this volume examines existing and

historical debates about applied anthropology it explores the relationship between the pure and the impure academic and applied anthropology the question of anthropological identities in new working environments new methodologies appropriate to these contexts the skills needed by anthropologists working in applied contexts where multidisciplinary work is often undertaken issues of ethics and responsibility and how anthropology is perceived from the outside the volume signifies an encouraging future both for the application of anthropology outside academic departments and for the new generation of anthropologists who might be involved in these developments
