artificial intelligence and causal inference address the recent development of relationships between artificial intelligence ai and causal inference despite significant progress in ai a great challenge in ai development we are still facing is to understand mechanism underlying intelligence including reasoning planning and imagination understanding transfer and generalization are major principles that give rise intelligence one of a key component for understanding is causal inference causal inference includes intervention domain shift learning temporal structure and counterfactual thinking as major concepts to understand causation and reasoning unfortunately these essential components of the causality are often overlooked by machine learning which leads to some failure of the deep learning ai and causal inference involve 1 using ai techniques as major tools for causal analysis and 2 applying the causal concepts and causal analysis methods to solving ai problems the purpose of this book is to fill the gap between the ai and modern causal analysis for further facilitating the ai revolution this book is ideal for graduate students and researchers in ai data science causal inference statistics genomics bioinformatics and precision medicine key features cover three types of neural networks formulate deep learning as an optimal control problem and use pontryagin s maximum principle for network training deep learning for nonlinear mediation and instrumental variable causal analysis construction of causal networks is formulated as a continuous optimization problem transformer and attention are used to encode decode graphics rl is used to infer large causal networks use vae gan neural differential equations recurrent neural network rnn and rl to estimate counterfactual outcomes ai based methods for estimation of individualized treatment effect in the presence of network interference
