networks pervade social and economic life and they play a prominent role in explaining a huge variety of social and economic phenomena standard economic theory did not give much credit to the role of networks until the early 1990s but since then the study of the theory of networks has blossomed at the heart of this research is the idea that the pattern of connections between individual rational agents shapes their actions and determines their rewards the importance of connections has in turn motivated the study of the very processes by which networks are formed in connections sanjeev goyal puts contemporary thinking about networks and economic activity into context he develops a general framework within which this body of research can be located in the first part of the book he demonstrates that location in a network has significant effects on individual rewards and that given this it is natural that individuals will seek to form connections to move the network in their favor this idea motivates the second part of the book which develops a general theory of network formation founded on individual incentives goyal assesses the robustness of current research findings and identifies the substantive open questions written in a style that combines simple examples with formal models and complete mathematical proofs connections is a concise and self contained treatment of the economic theory of networks one that should become the natural source of reference for graduate students in economics and related disciplines

previous books of the leadership horizon series showed unequivocally how both leaders and followers play an equally important part in the co production of leadership outcomes and how leader and follower identities are fluid so that the same individual can enact both at different times this book stretches the notion of leadership a step further by exploring the co enactment of both roles identities and positions of leader and follower by one same individual this individual is defined as a connecting leader as in this co enactment he she functions as connector between different leadership relationships the concept of connecting leader emerges from the observation that most individuals in organizations engage in the leader follower role co enactment managers pulled between executives and reportees ceos between the board and the head of departments or employees involved in cross functional teams leading and following in different degrees subject to their expertise yet despite its pervasiveness this concept is at best under theorized by the literature which dominated by dyadic and romanticized views mostly presents the roles as enacted by separate individuals facing each other to advance our understanding of connecting leaders the editor proposes to shift our focus on leadership in three ways to unpack the interconnectedness and interplay of leader and follower identities to investigate the tensions arising from the co enactment and how these can be overcome to widen the way in which we study leadership through new configurations e g leadership triads and ontologies and finally to consider the similarities between leading and following the book chapters are organized to mirror these areas of exploration understanding leadership from a perspective that acknowledges that many individuals in organizations are not just leaders or followers but both democratizes the way we theorize leadership and moves us further away from the temptation to romanticize it
