the goal of every drug delivery system is to deliver the precise amount of a drug at a pre programmed rate to the desired location in order to achieve the drug level necessary for the treatment an essential guide for biomedical engineers

and pharmaceutical designers this resource combines physicochemical principles with physiological processes to facilitate the design of systems that will deliver medication at the time and place it is most needed

pharmacokinetics is the study of the process of drug absorption distribution metabolism and elimination the aim of applying pharmacokinetic principles is to individualise the dose of drug and optimise the outcome achieved in each patient its application reduces the chance of under treatment inadvertent poisoning and dose related adverse effects this new edition is specifically aimed at supporting undergraduate studies in pharmacokinetics and has a strong emphasis on the application of pharmacokinetics in routine clinical practice clinical pharmacokinetics also includes several case studies and questions and answers to further aid understanding and revision
