this book examines two questions do people make use of abstract rules such as logical and statistical rules when making inferences in everyday life can such abstract rules be changed by training contrary to the spirit of reductionist theories from behaviorism to connectionism there is ample evidence that people do make use of abstract rules of inference including rules of logic statistics causal deduction and cost benefit analysis such rules moreover are easily alterable by instruction as it occurs in classrooms and in brief laboratory training sessions the fact that purely formal training can alter them and that those taught in one content domain can escape to a quite different domain for which they are also highly applicable shows that the rules are highly abstract the major implication for cognitive science is that people are capable of operating with abstract rules even for concrete mundane tasks therefore any realistic model of human inferential capacity must reflect this fact the major implication for education is that people can be far more broadly influenced by training than is generally supposed at high levels of formality and abstraction relatively brief training can alter the nature of problem solving for an infinite number of content domains

is our case strong enough to go to trial will interest rates go up can i trust this person such questions and the judgments required to answer them are woven into the fabric of everyday experience this book first published in 2002 examines how people make such judgments the study of human judgment was transformed in the 1970s when kahneman and tversky introduced their heuristics and biases approach and challenged the dominance of strictly rational models their work highlighted the reflexive mental operations used to make complex problems manageable and illuminated how the same processes can lead to both accurate and dangerously flawed judgments the heuristics and biases framework generated a torrent of influential research in psychology research that reverberated widely and affected scholarship in economics law medicine management and political science this book compiles the most influential research in the heuristics and biases tradition since the initial collection of 1982 by kahneman slovic and tversky
