with speech act theory assuming a renewed importance in the field of literary studies and philosophy foundations of speech act theory offers a timely thorough and above all compelling examination of the complexities of illocutionary acts performatives and their phenomenological basis savas tsohatzidis has collected an impressive range of international scholars on the subject clearly demonstrating the relevance of speech act theory to semantic theory the collection further interrogates the inability of pragmatic theories of illocution to properly locate such speech acts within the logic of phenomenology and intersubjectivity extending this analysis to the related

discipline of philosophy tsohatzidis's contributors provide an elucidating investigation of problems lying outside the field of the philosophy of language while also offering other alternative and rigorous perspectives for linguistic and philosophical inquiry

did earlier speakers of English use the same speech acts that we use today? Did they use them in the same way? How did they signal speech act values and how did they negotiate them in case of uncertainty? These are some of the questions that are addressed in this volume in innovative case studies that cover a wide range of speech acts from Old English to present-day English. All the studies offer careful discussions of methodological and theoretical issues as well as detailed descriptions of specific speech acts. The first part of the volume is devoted to directives and commissives, i.e. speech acts such as requests, commands and promises. The second part is devoted to expressives and assertives and deals with speech acts such as greetings, compliments and apologies. The third part finally contains technical reports that deal primarily with the problem of extracting speech acts from historical corpora.

In *Meaning and Speech Acts* Daniel Vanderveken further develops the logic of speech acts and the logic of propositions to construct a general semantic theory of natural languages.

This book presents a new classification of speech acts. It is an alternative to all previously published classifications of speech acts. The classification proposed here is based on an extensive set of data from all the verbs designating linguistic activities and aspects thereof. A theoretically and methodologically justifiable method is used to proceed in a number of steps from these data to the classification. The classification is documented in a lexicon with two sections. The first section exhibits the classification in all its details: each verb is listed to its meaning at the appropriate place in the classification according the second, alphabetically ordered section, which enables one to locate the verbs classified in the first part. The speech act classification as presented in this book has a number of consequences for linguistic theorizing. The book makes advances in three linguistically relevant fields: speech act theory, lexicology and theory of meaning in speech act theory. Firstly, of course, a classification is proposed which is theoretically justified and which is simultaneously based explicitly and systematically on linguistic data. Secondly, a wider concept of speech acts is introduced which proves its value by making possible a linguistically justified classification. Thirdly, the concept of speech act sequence or more generally partial order is brought into focus as a major organizational principle of the semantic relation between speech acts.

This small but tightly packed volume is easily the most substantial discussion of speech acts since John Austin's *How to Do Things with Words* and one of the most important contributions to the philosophy of language in recent decades (*Philosophical Quarterly*).

This work consists of an examination and revision of some of the main theses of speech act theory in relation to the problem of ideology and action guiding language. Starting from the idea that linguistic philosophy must take into account how the social structure of the linguistic community may influence and direct the way its language is used, a critical method of analysis is proposed. Developing speech act theory in a way suitable for this purpose, the main guideline of this proposal is the consideration that a theory of action rather than a theory of meaning should be taken as central in the analysis of language. The notion of illocutionary force, the problem of intentions and conventions in the constitution of speech acts, the definition of context and the classification of speech acts are then discussed based on the conclusions of this discussion. A pragmatic method for the analysis of language is formulated.

First published in 1985, this book aims to develop an approach to speech acts that has the virtue of being straight forward, explicit, formal and flexible enough to accommodate many of the more general problems of interactive verbal communication. The first chapter introduces situation semantics with the second addressing the assumptions implied by the problem of representing speaker intentionality. The third chapter presents a streamlined theory of speech acts and the fourth tests the predictions of the theory in several hypothetical discourse situations. A summary and suggestions for further research is provided in chapter five and appendices facilitate reference to key concepts.

Both linguists and philosophers have for a number of years been interested in the concept of

speech acts first proposed by J. L. Austin but each discipline has remained uniformed on the often parallel work of the other this volume brings together linguistic and philosophical approaches to speech acts in order to bring out agreements and disagreements many of the articles focus on the problem of indirect speech acts or conversational implicature such indirect speech acts are a major impediment to a coherent explanatory account of the relation between sound and meaning since it is not clear whether the use of a sentence to perform an indirect speech act is part of the sentence's linguistically significant meaning to be handled by syntactic rules or whether this use is best explained on some other basis such as a theory of language use in this volume such philosophers as John Searle and H. P. Grice examine the relation between the content of a sentence and the conditions under which it can be used to perform a given speech act while such linguists as John Robert Ross Georgia M. Green and Jerryold M. Sadock show that the illocutionary intent of a speaker is often reflected in the syntactic properties of the sentence he uses this book with its full airing of the controversy regarding the status of conversational implicature and syntactic rules will be invaluable to both linguists and philosophers concerned with semantics and pragmatics

whereas the relationship between truth and propositional content has already been intensively investigated there are only very few studies devoted to the task of illuminating the relationship between truth and illocutionary acts this book fills that gap this innovative collection addresses such themes as the relation between the concept of truth and the success conditions of assertions and kindred speech acts the linguistic devices of expressing the truth of a proposition the relation between predication and truth

this book introduces the main concepts of pragmatics as they relate to the young English language learner classroom and research with young second language learners. It considers the speech acts which are particularly relevant to YLLs and presents research findings on learners' development of speech act perception and production. It provides pre and in-service second language L2 teachers, teacher educators and researchers with an understanding of young learners' pragmatic development and with ideas for research based approaches and specific classroom activities to help foster speech act development in the YLL classroom moving beyond the research methods traditionally employed in L2 pragmatics research. It also demonstrates how participant centred data elicitation methods can be effective when conducting research with children. This book will appeal to researchers, advanced undergraduate and postgraduate students in applied linguistics and TESOL as well as pre and in-service primary school L2 teachers and teacher educators.

this study proposes a new theory of speech acts dynamic speech act theory. It is predicated on the assumption that speech act theory if it is to be of genuine empirical and theoretical significance must be embedded within a general theory of conversational competence capable of accounting for how we do things with words in naturally occurring conversation and it synthesizes traditional speech act theory, conversation analysis and artificial intelligence research in natural language processing
