diamond is the record setter in many mineralogical properties such as hardness diffusivity thermal conductivity purity and covalency of bonding similarly diamond as the premier gemstone of the mantle holds primacy for geological features such as age and depth of origin diamond was among the first crystalline structures to be solved by x ray diffraction and the first materials measured for their raman spectrum at more than 80 billion usd in yearly commercial value diamond sets the record for the most traded valuable mineral on the planet despite its chemical simplicity diamond has been the object of more research effort and had more scientific and popular press pages written about it than any other mineral

analytical archaeometry describes this interesting and challenging field of research on the border between natural sciences chemistry spectroscopy biology geology and humanities archaeology art history conservation sciences it fills the gap between these two areas whilst focussing on the analytical aspects of this research field the first part of the book studies the main analytical techniques used in this research field the second part expands from the different types of materials usually encountered and the final part is organised around a series of typical research questions the book is not only focussed on archaeological materials but is also accessible to a broader lay audience overall the book is clearly structured and gives insight into different approaches to the study of analytical providing extensive discussion on a wide range of techniques materials questions and applications due to the advances in analytical instrumentation and applications in this field it is important to have all this information merged together academics as well as professionals in archaeology art history museum labs and conservation science will find this an invaluable reference source ensuring the reader is provided with the

latest progress in this research field

high temperature and high pressure treatment of diamond is becoming an important technology to elaborate diamonds this is the first book providing a comprehensive review of the properties of hpht treated diamonds based on the analysis of published data and the work of the authors the book gives a detailed analysis of the physics of transformation of internal structures of diamonds subjected to hpht treatment and discusses how these transformations can be detected using methods of optical microscopy and spectroscopy it also gives practical recommendations for the recognition of hpht treated diamonds the book is written in a language and terms which can be understood by a broad audience of physicists mineralogists and gemologists
