raising the average human lifespan by a decade or more will change our world the future is not about whether this will happen it is about what we should do when it happens even the most pessimistic assertions about the future of our environment are underestimating the extent of the problem there is simply no model in which more years of life does not equate to more people and in which that does not lead to more crowding environmental degradation more consumption and more waste hence as we prolong life these environmental crises will be further exacerbated with current diets and production practices feeding 7.6 billion people is degrading terrestrial and aquatic ecosystems depleting water resources and driving climate changes the challenges of today are not just population and it's not just consumption it is waste also thanks to things such as cars planes big homes deforestation and so forth the annual carbon dioxide emissions of an average are three times as high as it should be it is likely that this signals that the current level of dividends is unsustainable hence we use and return little of value to our natural world in our book we address the questions related to environmental health challenges that include contamination of air water and soil and car transportation in order to better

understand natural industrial and social environmental hazards we have to think of them in a broader context i.e physical chemical biological and cultural we hope that the presented publication gives the reader a broader perspective on the issues related to environmental health challenges in contemporary society in the coming years

according to the world health organization air pollution is one of the most important environmental risk to health influencing the burden of disease such as stroke heart disease lung cancer but also chronic and acute respiratory diseases including bronchial asthma for years who has also been alarming about the enormous number of premature deaths that are attributed each year to exposure to air pollution it is estimated that air pollution is responsible for over 7 million human lives of which over 4 million are attributed to the exposure to ambient outdoor air pollutants therefore it is a leading factor determining the global scale of morbidity and mortality not only due to serious diseases of the cardiovascular and respiratory systems or neoplastic diseases but also significantly affects the reduced quality of life usually associated with disability caused by chronic disease

an important aspect of sustainable and regenerative urban development is to improve collective well being standards the united nations endorsed the 2030 agenda for sustainable development in 2015 which establishes seventeen sustainable development goals sdgs to end poverty protect the planet and improve the lives and prospects of everyone and everywhere by 2030 urban green spaces have a significant impact on the living condition and public health which are closely associated with several sdgs including good health and well being sdg 3 clean water and sanitation sdg 6 industry innovation and infrastructure sdg 9 and sustainable cities and communities sdg 11 here the concept of one health gains high relevance by recognizing that interconnections among humans animals and environment is a key issue in public health and wellbeing that stimulates interdisciplinary collaborations to develop a more holistic understanding and effective action against public health threats

the man who invented the future verne created the prototype for modern science fiction his prophetic 1870 adventure novel featuring a bizarre underwater craft commanded by the mysterious captain nemo predated the submarine the crowning achievement of verne s literary career the book influenced h g wells and later generations of writers
