signals systems transforms and digital signal processing with matlab has as its principal objective simplification without compromise of rigor graphics called by the author the language of scientists and engineers physical interpretation of subtle mathematical concepts and a gradual transition from basic to more advanced topics are meant to be among the important contributions of this book after illustrating the analysis of a function through a step by step addition of harmonics the book deals with fourier and laplace transforms it then covers discrete time signals and systems the z transform continuous and discrete time filters active and passive filters lattice filters and continuous and discrete time state space models the author goes on to discuss the fourier transform of sequences the discrete fourier transform and the fast fourier transform followed by fourier laplace and z related transforms including walsh hadamard generalized walsh hilbert discrete cosine hartley hankel mellin fractional fourier and wavelet he also surveys the architecture and design of digital signal

processors computer architecture logic design of sequential circuits and random signals he concludes with simplifying and demystifying the vital subject of distribution theory drawing on much of the author s own research work this book expands the domains of existence of the most important transforms and thus opens the door to a new world of applications using novel powerful mathematical tools

for sophomore junior level signals and systems courses in electrical and computer engineering departments signals systems and transforms fourth edition is ideal for electrical and computer engineers the text provides a clear comprehensive presentation of both the theory and applications in signals systems and transforms it presents the mathematical background of signals and systems including the fourier transform the fourier series the laplace transform the discrete time and the discrete fourier transforms and the z transform the text integrates matlab examples into the presentation of signal and system theory and applications
