manchester metropolitan university business school department of politics course ba thesis language english abstract abstract there is no regularity in international relations that is as imperturbable as the democratic peace from the beginning of the statistical research in 1816 until today no clear cut case of war between two democratic states has been recorded the democratic peace has obstinately kept the secret of its causal mechanism no convincing theory as to its cause has been widely accepted it is the aim of this dissertation to provide an alternative explanation for why democracies do not fight each other empirical research can only account for correlation but not for causal mechanisms this dissertation thus concentrates on the theoretical explanations scholars developed approaches to account for the democratic peace ranging from constructivist through the sociological to game theoretical methodology they focus on the single democratic state the relation between two democratic states and recently the international system itself this dissertation critically examines a number of such theories which vary in methodology and focus especially arguments by russett doyle and müller are given attention but to a greater or lesser extent they are flawed or insufficient at the same time this dissertation points out a number of special characteristics of democratic states of importance pulling those together an approach is proposed based on the assumption that the international system itself bears a major responsibility for the democratic peace supporting an approach by hasenclever it is argued that international institutions set up by democratic states are especially capable of mitigating conflicts and thus prevent war together with the special features of their member states such organisations account for the peaceful behaviour of democracies
