beyond simulation and algorithm development many developers increasingly use matlab even for product deployment in computationally heavy fields this often demands that matlab codes run faster by leveraging the distributed parallelism of graphics processing units gpus while matlab successfully provides high level functions as a simulation tool for rapid prototyping the underlying

details and knowledge needed for utilizing gpus make matlab users hesitate to step into it accelerating matlab with gpus offers a primer on bridging this gap starting with the basics setting up matlab for cuda in windows linux and mac os x and profiling it then guides users through advanced topics such as cuda libraries the authors share their experience developing algorithms using matlab c and gpus for huge datasets modifying matlab codes to better utilize the computational power of gpus and integrating them into commercial software products throughout the book they demonstrate many example codes that can be used as templates of c mex and cuda codes for readers projects download example codes from the publisher s website booksite elsevier com 9780124080805 shows how to accelerate matlab codes through the gpu for parallel processing with minimal hardware knowledge explains the related background on hardware architecture and programming for ease of use provides simple worked examples of matlab and cuda c codes as well as templates that can be reused in real world projects
