studies of opera film television and literature have demonstrated how constructions of madness may be referenced in order to stigmatise but also liberate protagonists in ways that reinforce or challenge contemporaneous notions of normality but to date very little research has been conducted on how madness is represented in popular music in an effort to redress this imbalance nicola spelman identifies links between the anti psychiatry movement and representations of madness in popular music of the 1960s and 1970s analysing the various ways in which ideas critical of institutional psychiatry are embodied both verbally and musically in specific songs by david bowie lou reed pink floyd alice cooper the beatles and elton john she concentrates on meanings that may be made at the point of reception as a consequence of ideas about madness that were circulating at the time these ideas are then linked to contemporary conventions of musical expression in order to illustrate certain interpretative possibilities supporting evidence comes from popular musicological analysis incorporating discourse analysis and social semiotics and investigation of socio historical context the uniqueness of the period in question is demonstrated by means of a more generalised overview of songs drawn from a variety of styles and eras that

engage with the topic of madness in diverse and often conflicting ways the conclusions drawn reveal the extent to which anti psychiatric ideas filtered through into popular culture offering insights into popular music s ability to question general suppositions about madness alongside its potential to bring issues of men s madness into the public arena as an often neglected topic for discussion

the vast literature on virginia woolf s life work and marriage falls into two groups a large majority is certain that she was mentally ill and a small minority is equally certain that she was not mentally ill but was misdiagnosed by psychiatrists in this daring exploration of woolf s life and work thomas szasz famed for his radical critique of psychiatric concepts coercions and excuses examines the evidence and rejects both views instead he looks at how virginia woolf as well as her husband leonard used the concept of madness and the profession of psychiatry to manage and manipulate their own and each other s lives do we explain achievement when we attribute it to the fictitious entity we call genius do we explain failure when we attribute it to the fictitious entity we call madness or do we deceive ourselves the same way that the person deceives himself when he attributes the easy ignition of hydrogen to its being flammable szasz interprets virginia woolf s life and work as expressions of her character and her character as the product of her free will he offers this view as a corrective against the prevailing ostensibly scientific view that attributes both her madness and her genius to biological genetic causes we tend to attribute exceptional achievement to genius and exceptional failure to madness both says szasz are fictitious entities

the pervasive idea that madness and creativity are intricately linked is one that holds tremendous fascination for both scientists and the general public alike although this view was at first largely driven by anecdotal evidence showcasing the manifestation of mental illness in individuals who exhibited

extraordinary levels of creativity in various spheres of life it initiated a strong impetus to empirically investigate the association between mental health and creativity a variety of approaches and combinations of approaches have been adopted to address this association including clinical personality psychometric behavioral cognitive historiometric and neuroscientific despite the ever accumulating body of evidence over the past six decades investigating this link what is lacking is a comprehensive overview of the disparate findings from these different approaches that will enable us to address the question of whether there is an empirically founded relationship between creativity and mental illness and if such a link does exist what is the nature of this association the purpose of this research topic was to motivate theorists and researchers to answer this question or at least attempt to do so given the available evidence thus far the themes of interest that were open to exploration in view of this topic included a which mental disorders are positively associated with creativity b which mental disorders are negatively associated with creativity c the dynamics of information processing biases positive versus negative associated with psychiatric and high risk populations d theories regarding the madness creativity link e personality based studies on creativity f creativity mental illness and the brain g genes and creativity h how can studies on neurological populations inform this debate i what are the areas of impact with regard to real world applications and practice j historical timeline of this question k evolutionary perspectives on the madness creativity link l methodological problems associated with this field m philosophical issues to bear in mind when investigating this domain n the usefulness of the troubled genius concept the invitation to contribute was open to all interested academics regardless of whether they were seasoned explorers within this field of study or just beginning to get their feet wet in its murky waters as a result of adopting this inclusive approach the contributions showcase a wide variety of perspectives from academic departments and institutions the world
