this book combines the results of current research with essential background material to provide complete in depth coverage of every aspect of in situ and ex situ bioremediation as well as an extensive overview of the physical and chemical processes currently available for treating petroleum contaminated soils critical information has been collected and assembled under one cover to provide a convenient reference for anyone who must contend with this worldwide problem remediation of petroleum contaminated soils biological physical and chemical processes describes how to optimize the biodegradation of petroleum hydrocarbons in soil water systems it reports on the susceptibility of

various petroleum components to biodegradation by microorganisms and considers all groups of microorganisms for their potential contributions the book also deals with problem areas such as the transport of organisms oxygen or nutrients throughout the subsurface as well as biodegradation of polynuclear aromatic hydrocarbons pahs and nonaqueous phase liquids napls in addition the book presents a variety of methods for monitoring bioremediation this reference discusses current soil remediation processes and includes many innovative approaches it also investigates means of controlling volatile organic compounds vocs and leachate and addresses methods for collecting and treating these secondary waste streams the expansive coverage of this book will furnish readers with a wide range of options for developing treatment strategies and for customizing procedures for specific requirements
