economists have proposed a large variety of models of the oil market and this survey integrates them in a coherent framework

harcourt has made substantial and wide ranging contributions to economics in general and to post keynesian economics in particular in this

volume more than forty leading economists pay tribute to and critically evaluate his work the contributors represent a wide range of schools in economics and include nobel laureates paul samuelson and robert solow

the model proposed by merton 1981 to determine the value of forecasting ability is adapted to investigate whether money market fund managers successfully anticipate changes in the yield curve by adjusting the average maturity of their portfolios in the right direction the potential economic value of such behavior is assessed and it is shown that if the portfolios of all money market funds were aggregated it would appear that managers are good forecasters even if individually they possess insignificant forecasting ability at the same time the economic value of the aggregate portfolio will be diminished because of the reduced net change in average maturity thus diversifying into many money market funds will not attain the gain that could be realized if an individual manager had a forecasting ability equal to the quality of the average forecast a sample of 34 money market funds is investigated analysis suggests that a small fraction of the funds exhibited forecasting skills but even they generated negligible economic value because the changes in their portfolios average maturity were too small there appears to be no relationship between forecasting ability and economic success of money market funds as measured by asset size and growth

this text offers modern coverage of modern industrial organizations including strategic behaviour and game theory it uses a unified structure to analyse theories and empirical evidence about the organization of firms and industries

the result of a massive study by the author of the effects of energy and energy shocks on the world economy the volume is organized around the theme that energy is an integral feature of the economy and that any interpretation of short term movements in economic activity is likely to be seriously at fault if it neglects energy supply changes and their repercussions the author takes both an historical and theoretical approach to the subject providing students and scholars of energy economics and political economy with a logical framework within which key worldwide energy issues and problems can be analyzed

this paper examines how measurement error biases longitudinal estimates of union effects it develops numerical examples statistical models and econometric estimates which indicate that measurement error is a major problem in longitudinal data sets so that longitudinal analyses do not provide the research panacea for determining the effects of unionism or other economic forces some have suggested there are three major findings 1 the difference between the cross section and longitudinal estimates is attributable in large part to random error in the measurement of who changes union status given modest errors of measurement of the magnitudes observed and a moderate proportion of workers changing union status also of the magnitudes observed measurement error biases downward estimated effects of unions by substantial amounts 2 longitudinal analysis of the effects of unionism on nonwage and wage outcomes tends to confirm the significant impact of unionism found in cross section studies with the longitudinal estimates of both nonwage and wage outcomes lower in the longitudinal analysis than in the cross

section analysis of the same data set 3 the likely upward bias of cross section estimates of the effect of unions and the likely downward bias of longitudinal estimates suggests that under reasonable conditions the two sets of estimates bound the true union impact posited in standard models of what unions do

this paper derives the value of pbgc pension insurance under two scenarios of interest the first allows for voluntary plan termination which appears to be legal under current statutes in the second scenario termination is prohibited unless the firm is bankrupt optimal pension funding strategy under each scenario is examined finally empirical estimates of pbgc liabilities are calculated these show that a small number of funds account for a large fraction of total prospective pbgc liabilities that those total liabilities greatly exceed current pbgc reserves for plan terminations and that pbgc liabilities could be substantially reduced by the prohibition of voluntary termination

the main issue of this paper is to study infant mortality in latin america in recent decades in so doing two questions must be answered first how large is the economic loss in terms of net national product due to child mortality under the age of 15 and what are the major causes of death second has the decline of infant mortality been principally a product of economic development in latin american countries surprisingly enough there is significant variation of economic losses across latin american countries such as from 0.99 of the net national product in uruguay to 18.93 in haiti eleven among the nineteen countries in latin america show their economic losses to be more than 3 of the net national product in recent years in marked contrast to those values found by kuznets 1980 for egypt 2.68 and the netherlands 0.17 in 1937 as the major causes of death in latin america these diseases influenza and pneumonia enteritis and other diarrheal diseases and other infective and parasitic diseases account for one third or more of total deaths for many latin american countries being provided with the fact that the proportion of infant mortality only is roughly about 20-30 of total deaths across the countries we speculate that these above diseases will be exclusively responsible for the high mortality in childhood in latin america the cranger sims dynamic system shows that economic development in latin america does not have strong explanatory power in accounting for the behavior of infant mortality rate in recent decades therefore the empirical results seem to support the view that medical and health technological development is the major cause of the reduction in infant mortality rates in latin american countries in recent decades however when economic development granger causes infant mortality as observed for only two countries the former becomes the main source of variation of the latter over long horizons
